# AT A GLANCE

A total of **95 200** people tested for HIV:  
**71 112** females and **24 088** males

**198 366** HIV+ active patients on antiretroviral therapy

Overall Viral Load Suppression – **96%**

Male VLS – **95%**

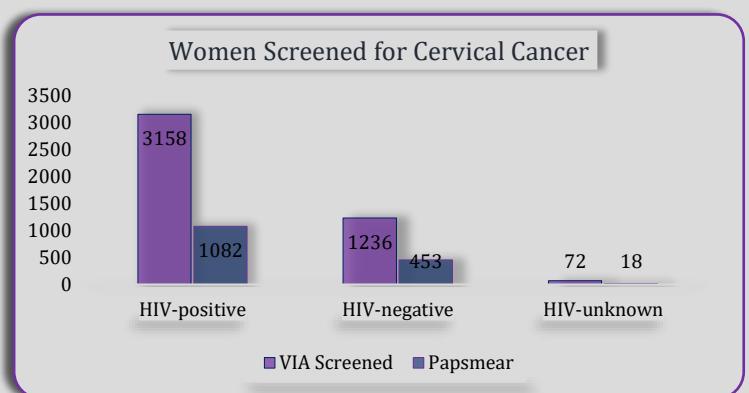

Female VLS – **97%**

**94%** Successfully linked to care

**2 047** Patients newly started on ART of which **1 924** were eligible for TPT and **1 216** Started TPT

TB Screening for Quarter three (Q3) is **90%**

**1 956** Voluntary Medical Male Circumcisions done

## PREFACE

The Response Monitoring and Evaluation (RME) subdivision, falls under the Expanded National AIDS Response Coordination Division of the Directorate of Special Programmes (DSP) within the Ministry of Health and Social Services (MHSS). The RME subdivision has three main roles that includes (1) supporting the Directorate of Special Programmes in providing guidance and coordination of routine data collection, (2) Shepherding of research and evaluation and (3) Coordination of the HIV and AIDS multi-sectoral monitoring and evaluation activities as part of the UNAIDS “Three Ones Principles” which calls for countries to have One National AIDS Authority, One Coordination and One Monitoring and Evaluation Framework.

This Bulletin is part of an agreed requirement outlined in various documents as a deliverable of the RME subdivision. One such document is the National Strategic Framework (NSF) for HIV and AIDS Response in Namibia 2017/18 to 2022/23 which is a necessary and critical feature of Namibia’s HIV and AIDS Response. This effort aims to highlight the good practices, challenges and plans being conducted by the subdivision. Additionally, it is a tool that is aimed at informing stakeholders on critical information for various uses, including planning and implementation of HIV/AIDS response.

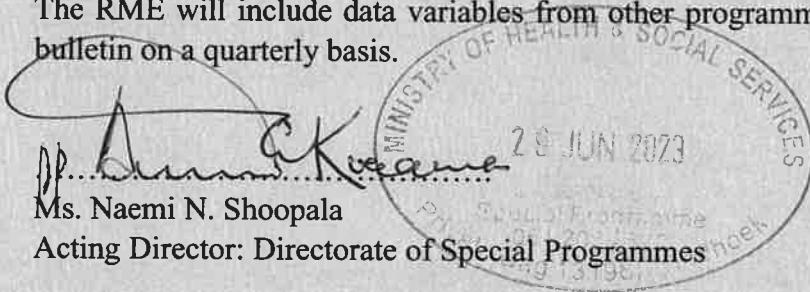

Data needs vary for different audiences and therefore exhibiting the progress of implementation of various programmes can never be sufficient. The expectation of this Bulletin focuses on the data and progress done for quarter three which runs from October to December of the 2022/23 financial year.

Data systems in many parts of the world face challenges of human resource constraints at all levels, limited infrastructures, and the level of data quality. These general challenges among others also affect the RME subdivision. The RME is continuously engaging various stakeholders to seek and implement various activities to improve data quality. Data collected by RME is subjected to rigorous processes to ensure quality. These efforts form the basis of our strong confidence in the data that RME produces.

The Directorate extends gratitude to all relevant stakeholders involved in the data collection, management and reporting for their continuous support and engagement in the HIV response. The Directorate would like to encourage various stakeholders and the public to utilize the information contained in this document.

The RME will include data variables from other programmes and continue the production of this bulletin on a quarterly basis.

Ms. Naemi N. Shoopala  
Acting Director: Directorate of Special Programmes

## **LIST OF ABBREVIATIONS**

- AIDS - Acquired Immunodeficiency Syndrome  
ART - Antiretroviral Therapy  
CECAP - Cervical Cancer Prevention  
COVID-19 - Coronavirus disease  
CSO - Civil Society Organization  
CxCa - Cervical Cancer  
DAPP - Development Aid from People to People  
DHIS2 - District Health Information System Version 2  
DSP - Directorate of Special Programmes  
eHTS - HIV Testing Services electronic system  
ePMS - Electronic Patient Monitoring System  
HIV - Human Immunodeficiency Virus  
HSRD - Health Sector Response Division  
HTS - HIV Testing Service  
LLETZ – Large Loop Excision of the Transformation Zone  
MHSS - Ministry of Health and Social Services  
MIMS - Multi-Sectoral Information Management System  
NAMAF – Namibia Association of Medical Aid Funds  
NHP – Namibia Health Plan  
NSF - National Strategic Framework  
PrEP - Pre-Exposure Prophylaxis  
Q-ePMS - Quantum-electronic Patient Monitoring System  
RME – Response Monitoring and Evaluation  
TB - Tuberculosis  
TPT - TB Preventative Therapy  
UNAIDS - United Nations Programme on HIV/AIDS  
VIA – Visual Inspection with Acetic Acid  
VMMC - Voluntary Medical Male Circumcision  
WBCG - Walvis Bay Corridor Group  
SRHR – Sexual and Reproductive Health and Rights

## SUMMARY NOTES

Welcome to our Quarterly Bulletin that describes HIV and related programmes performance for the period of October to December 2022. Data in this Bulletin is presented in two sections. Section one which presents data from the Ministry of Health and Social Services (MHSS) health facilities and Section two which presents data that was collected from community-based services provided by non-governmental organisations (NGOs) under the Multi-Sectoral Information Management System (MIMS).

This performance data covers program areas of HIV Testing Service (HTS), Antiretroviral Therapy (ART), TB screening among HIV positive clients, TB Preventative Therapy (TPT), Voluntary Medical Male Circumcision (VMMC) and Cervical Cancer Prevention (CECAP) Program.

Interpretation of performance results should be based on relevant inputs that were made, service delivery processes that took place during the quarter as well as other relevant internal and external contexts that influence program performance. For example, the CECAP program is more suited to provide an explanation for a decrease in the number of women screened for Cervical Cancer (CxCa) using Visual Inspection with Acetic Acid (VIA) method during this quarter compared to previous one.

A total of 95,200 individuals were tested for HIV infection (74.6% females) during the quarter of October to December 2022. Of these, 1,950 (2.0%) were found to be HIV positive. On the other hand, a total of 2,047 individuals were newly initiated on ART this quarter. While a total of 198,366 people living with HIV (PLHIV) were actively receiving ART. This quarter also showed an HIV viral load suppression rate of 96% among those who received viral load test.

During this quarter, less clients were tested for HIV compared to the last quarter i.e. 95,200 compared to 109,625 respectively. The number of patients active on ART this quarter decreased by 520 from 198,886 to 198,366. The decrease could relate to the common trend depicting low reporting rate from health facilities during the reporting period. This has always been associated with the effect of the festive season.

About 1,956 VMMC were done during the period of October to December 2022. Young men aged 15-19 years made up 39.2% of the beneficiaries. The data reported under the MIMS on VMMC represent only numbers coming from private practitioners registered with Abt Associates.

Lastly, data reported through the MIMS highlighted the significant contribution that community-based organisations are making in HIV case finding, particularly among men, with high positivity rate. The MIMS Program under RME has done a commendable work in obtaining ART data from WBCG and NHP during this quarter and this is a result of continuous engagement with the Civil Society Organizations (CSO). RME will continue to work closely with concerned stakeholders to facilitate this process.

## SECTION I: DATA REPORTED THROUGH MHSS FACILITIES

### HIV Testing

#### HIV Testing Service by Sex

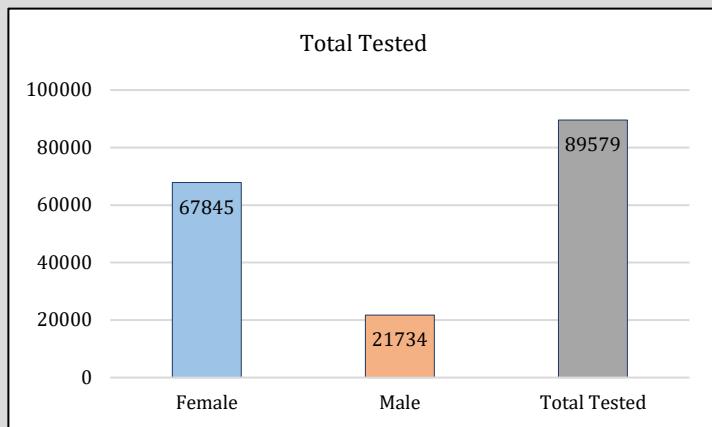

Figure 1: Total Number of Clients Tested for HIV by Sex in MHSS Health Facilities in Namibia, October to December 2022

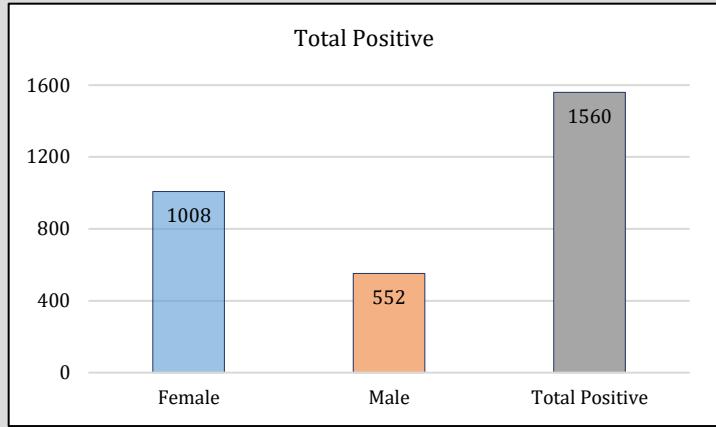

Figure 2: Total Number of Clients Tested Positive for HIV by Sex in MHSS Health Facilities in Namibia, October to December 2022

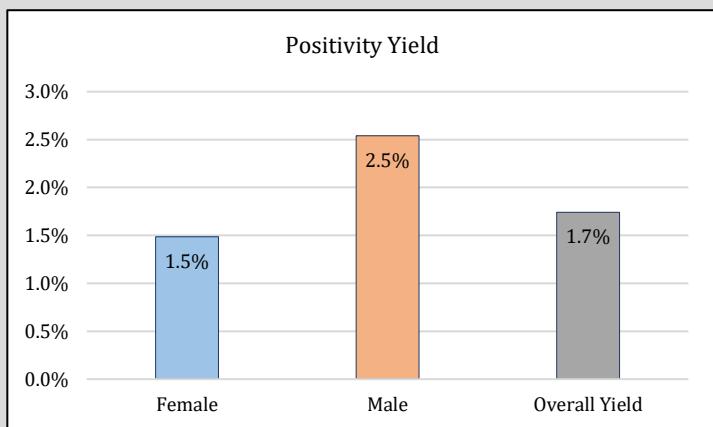

Figure 3: HIV Positivity Yield by Sex in MHSS Health Facilities in Namibia, October to December 2022

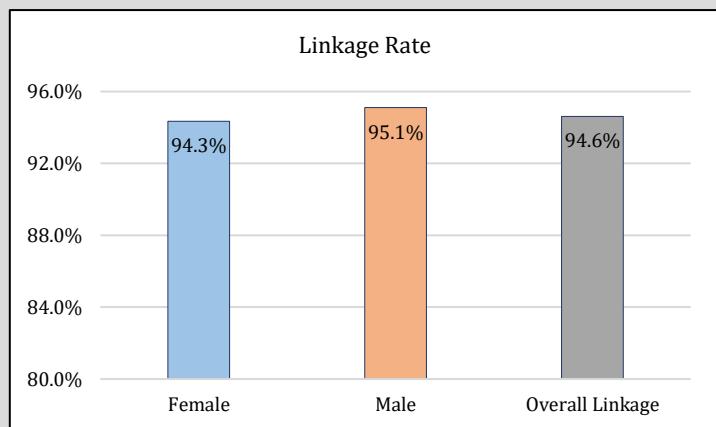

Figure 4: Proportion of Clients Tested HIV Positive and Linked to Care by Sex in MHSS Health Facilities in Namibia, October to December 2022

**Note:** Positivity yield is the percentage of clients who tested HIV positive out of the total number tested for HIV for that specific reporting period. i.e., Female positivity yield =  $(\text{Total number of female tested HIV positive} / \text{Total number of females tested for HIV}) \times 100$

## HIV Testing Service by Age Group

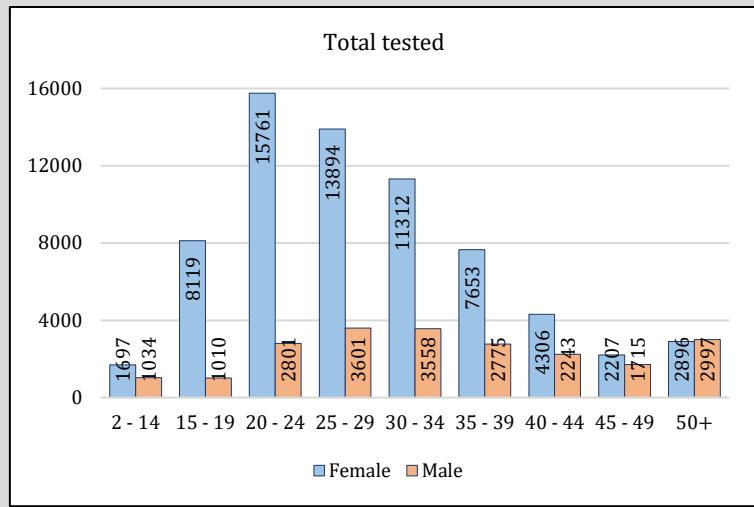

Figure 5: Total Number of Clients Tested for HIV by Sex and Age Group in MHSS Health Facilities in Namibia, October to December 2022

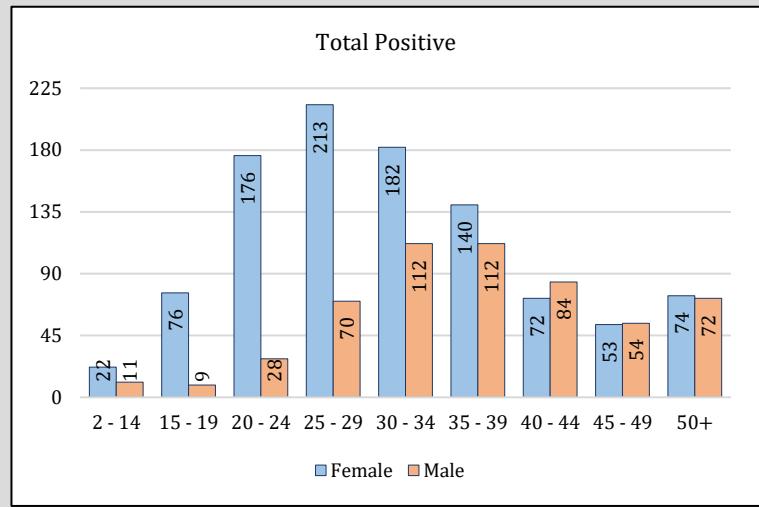

Figure 6: Total Number of Clients Tested Positive for HIV by Sex and Age Group in MHSS Health Facilities in Namibia, October to December 2022

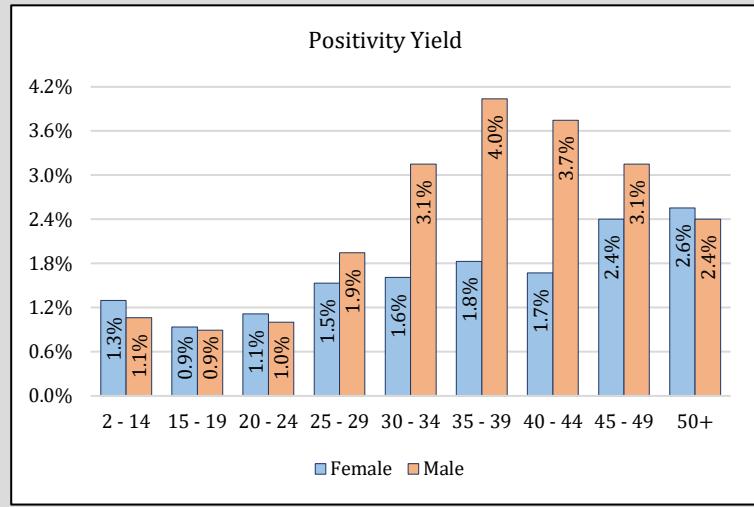

Figure 7: HIV Positivity Yield by Sex and Age Group in MHSS Health Facilities in Namibia, October to December 2022

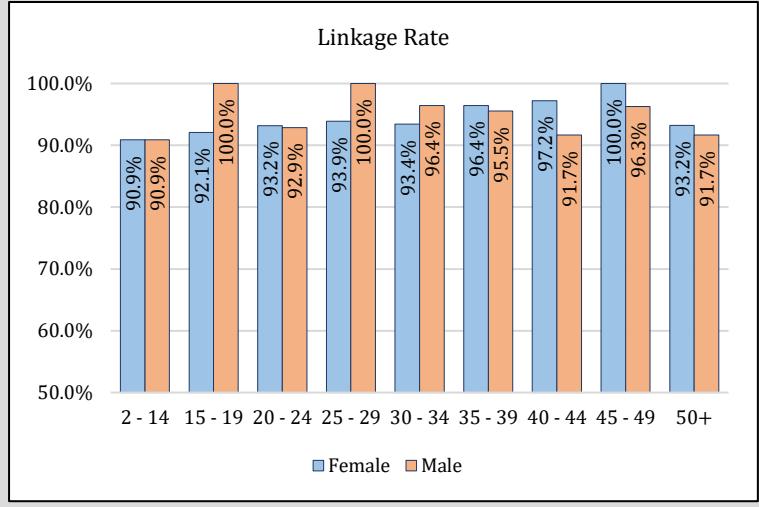

Figure 8: Proportion of Clients Tested HIV Positive and Linked to Care by Sex and Age group in MHSS Health Facilities in Namibia, October to December 2022

## HIV Testing Service by Region

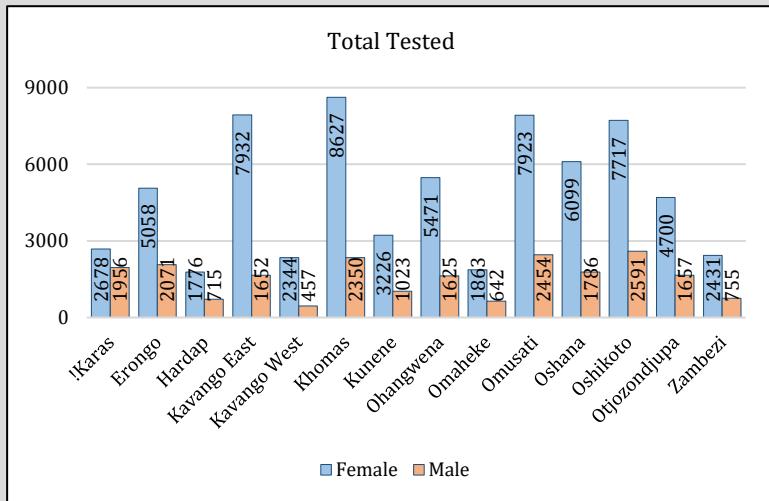

Figure 9: Total Number of Clients Tested for HIV by Sex and Region in MHSS Health Facilities in Namibia, October to December 2022

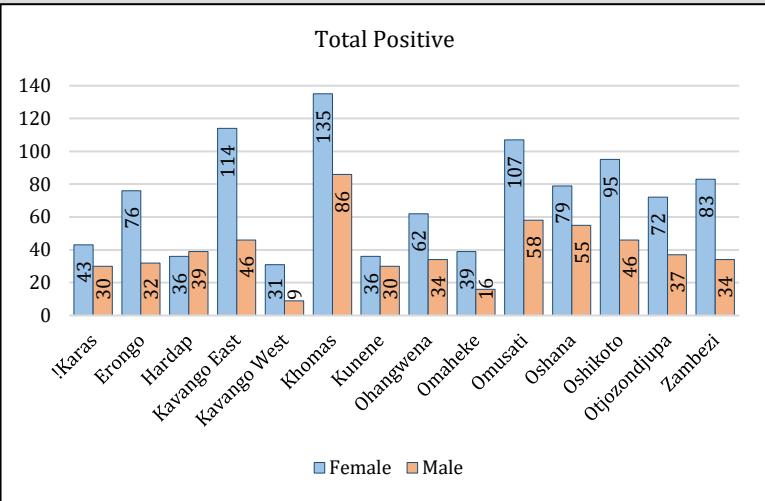

Figure 10: Total Number of Clients Tested Positive for HIV by Sex and Region in MHSS Health Facilities in Namibia, October to December 2022

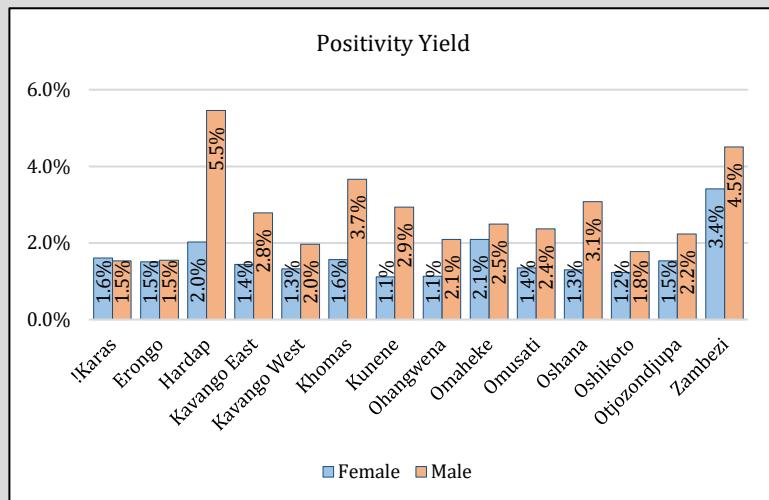

Figure 11: HIV Positivity Yield by Sex and Region in MHSS Health Facilities in Namibia, October to December 2022

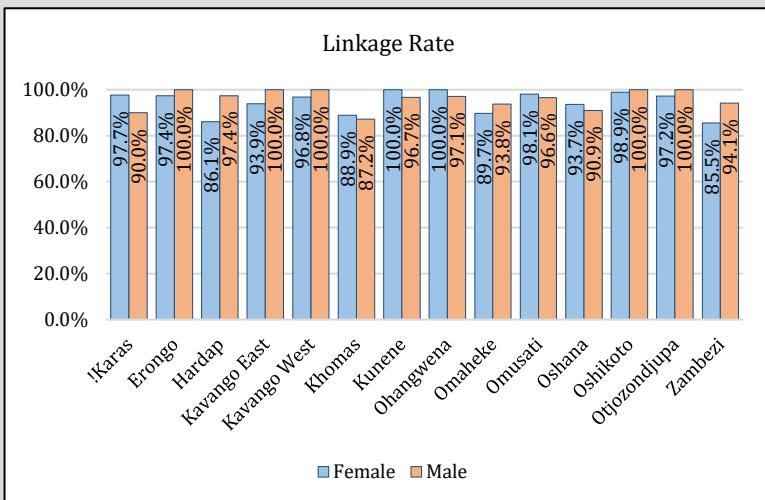

Figure 12: Proportion of Clients Tested HIV Positive and Linked to Care by Sex and Region in MHSS Health Facilities in Namibia, October to December 2022

## HIV Testing Service Trends

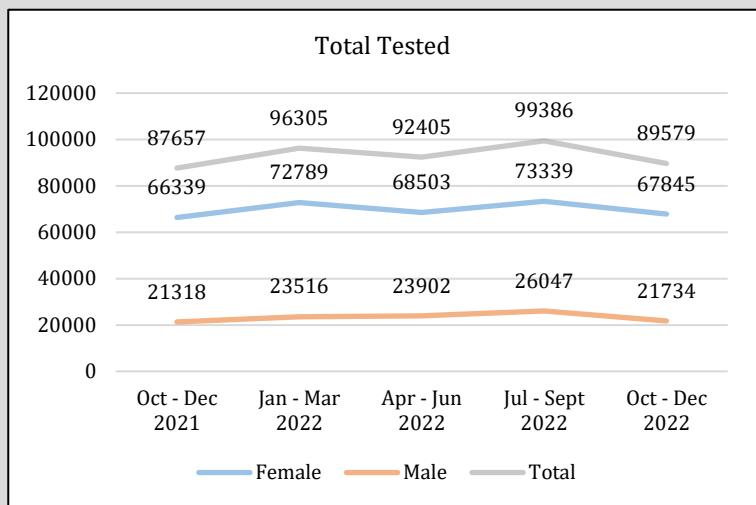

Figure 13: Quarterly Trend of Clients Tested for HIV by Sex in MHSS Health Facilities in Namibia, October 2021 to December 2022

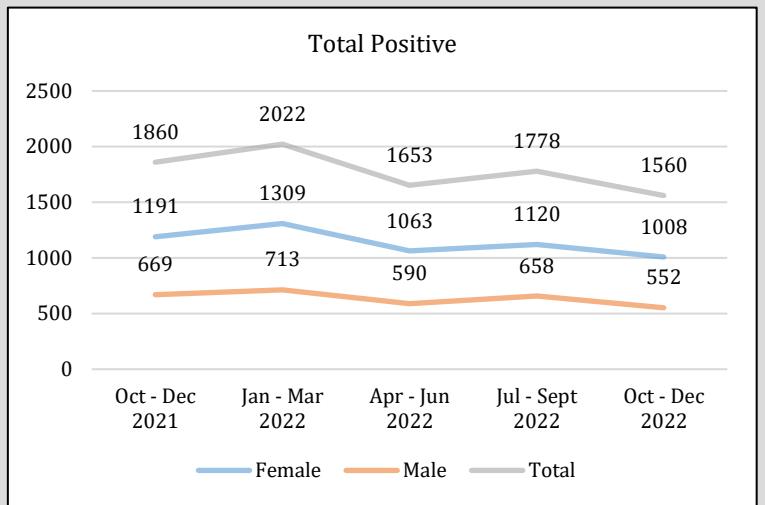

Figure 14: Quarterly Trend of Clients Tested HIV Positive by Sex in MHSS Health Facilities in Namibia, October 2021 to December 2022

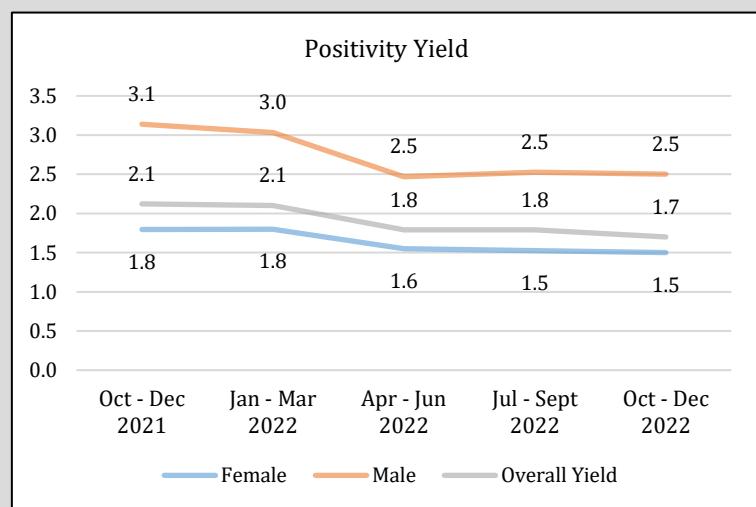

Figure 15: Quarterly Trend of HIV Positivity Yield by Sex in MHSS Health Facilities, October 2021 to December 2022

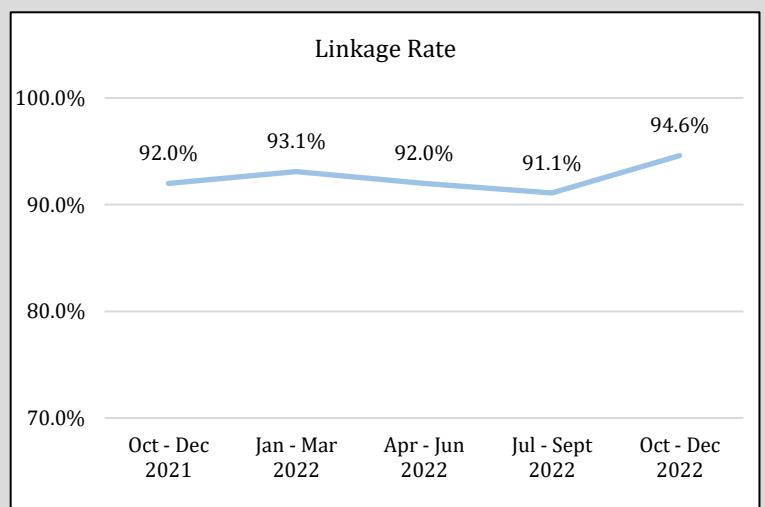

Figure 16: Quarterly Trend of Clients Tested HIV Positive and linked to Care in MHSS Health Facilities in Namibia, October 2021 to December 2022

## Period of Last HIV Test

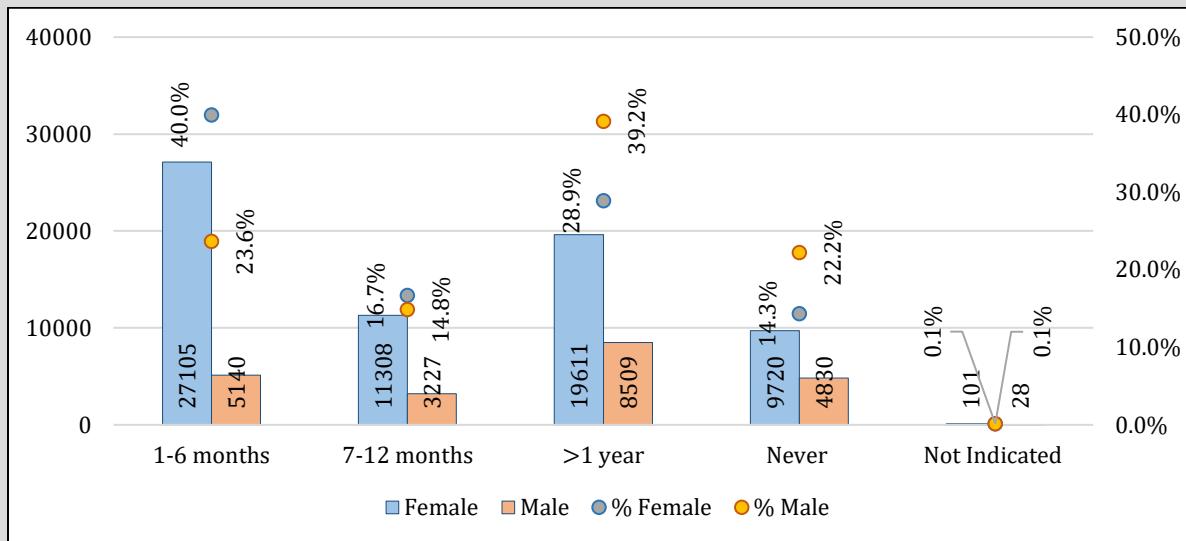

Figure 17: Number and Percentage of Clients Tested for HIV by Sex and Period of Last HIV Test, in MHSS Health Facilities in Namibia, October to December 2022

**\*Note:** The percentage is calculated out of the total tested for the quarter for each sex,  
i.e., % Female last tested at 1 – 6 months = **(number of female last tested 1 – 6 months / Total number of females tested for HIV) x 100**

## Reporting Rate in HTS Program

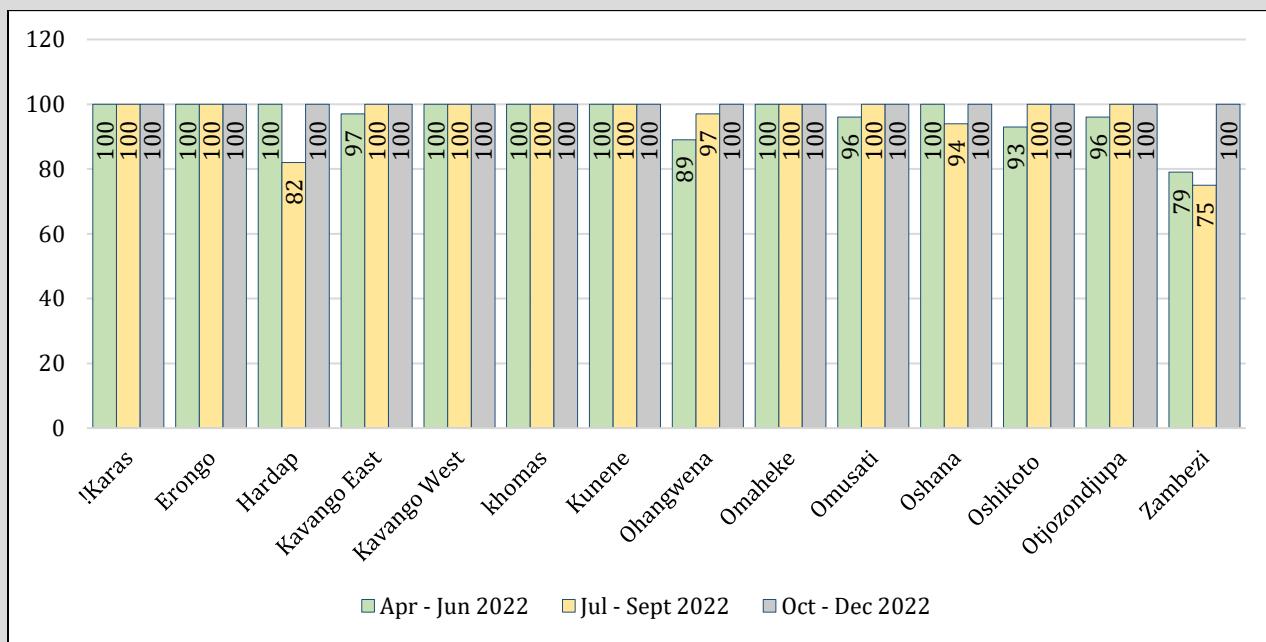

Figure 18: Quarterly Trends for eHTS Reporting Rate by Region in MHSS Health Facilities in Namibia, April 2022 to December 2022

## ART Services

### Patients Newly Started on ART

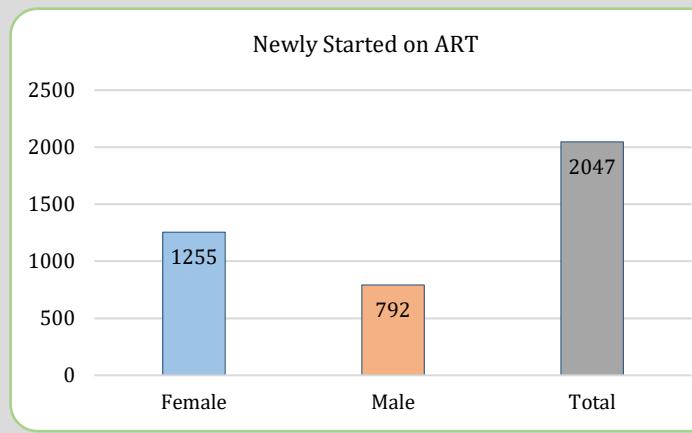

Figure 19: Total Number of Patients Newly Started on ART by Sex in MHSS Health Facilities in Namibia, October to December 2022

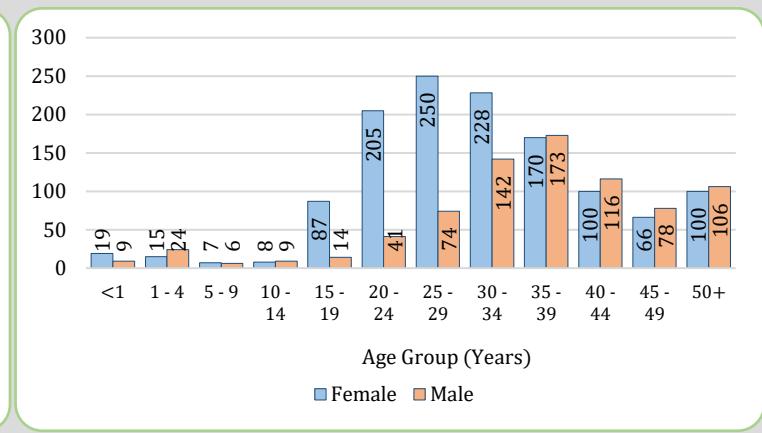

Figure 20: Total Number of Patients Newly Started on ART by Sex and Age Group in MHSS Health Facilities in Namibia, October to December 2022

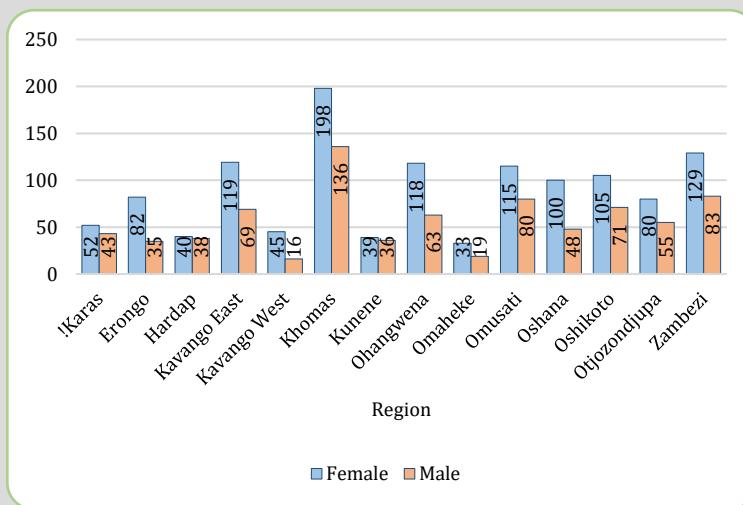

Figure 21: Total Number of Patients Newly Started on ART by Sex and Region in MHSS Health Facilities in Namibia, October to December 2022

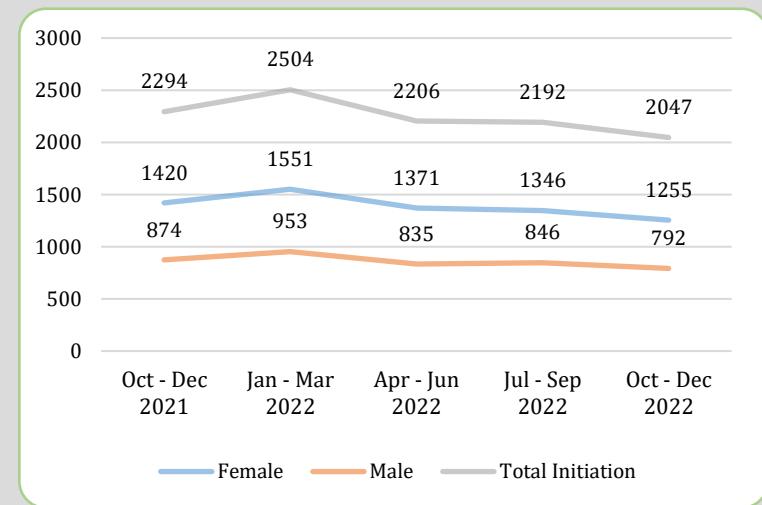

Figure 22: Quarterly Trend of Patients Newly Started on ART in MHSS Health Facilities in Namibia, July 2021 to September 2022

**\*Note:** The number of newly started on ART in all quarters except the one of Jan – Mar 2022 is comparable. There is a trend of high new on ART during (Jan – Mar) quarters as it was observed for the same quarter in 2021.

## Patients Currently Active on ART

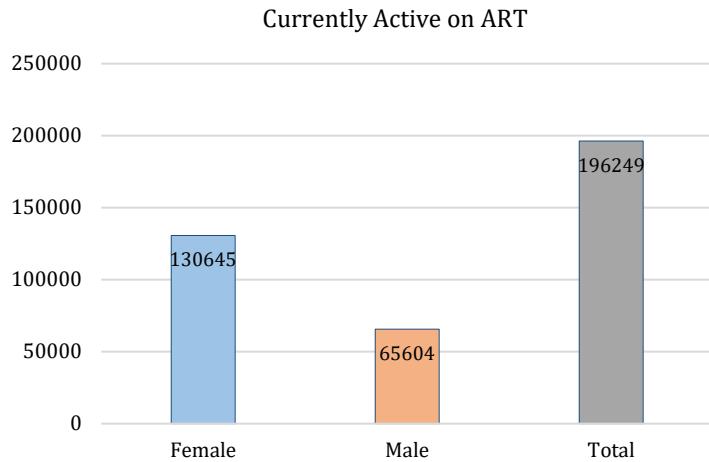

Figure 23: Total Number of Patients Currently on ART by Sex in MHSS Facilities Namibia, October to December 2022

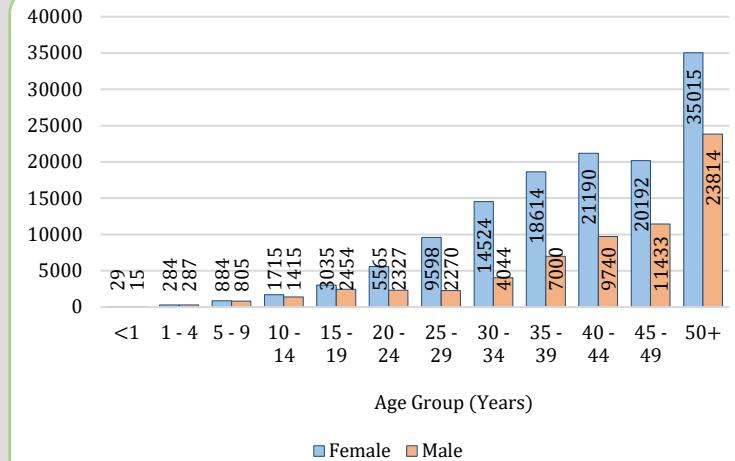

Figure 24: Total Number of Patients Currently on ART by Age Group and Sex in MHSS Health Facilities in Namibia, October to December 2022

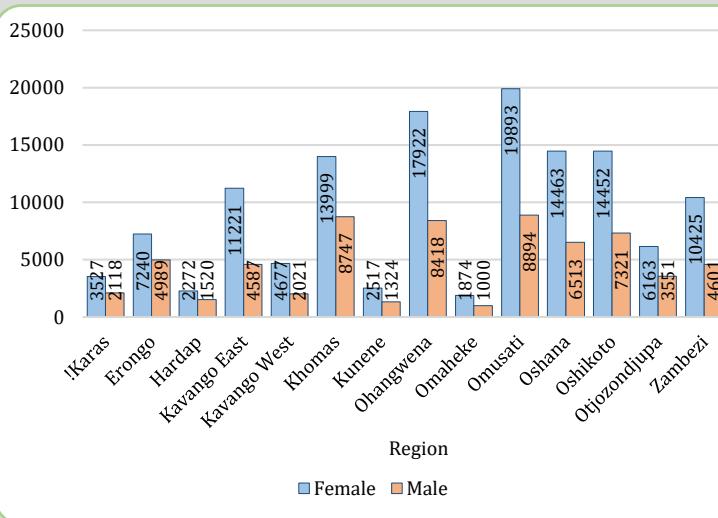

Figure 25: Total Number of Patients Currently on ART by Region and Sex in MHSS Health Facilities in Namibia, October to December 2022

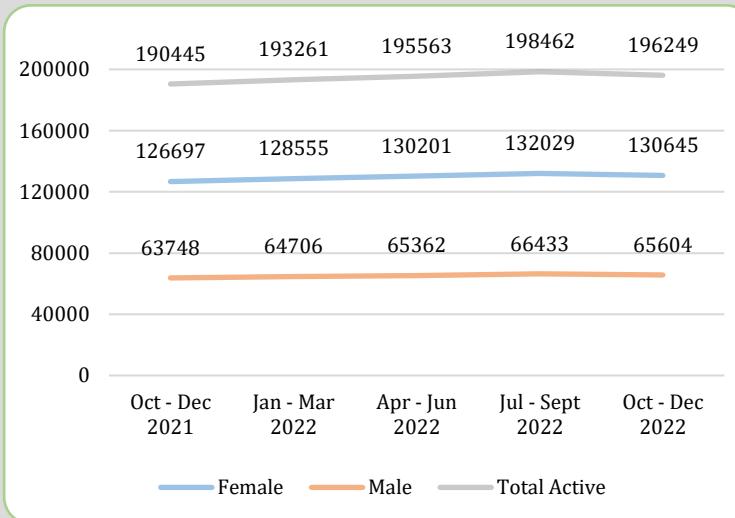

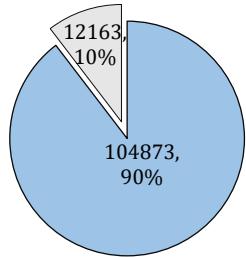

Figure 26: Quarterly Trend of Patients-Currently-on-ART in MHSS Health Facilities in Namibia, October 2021 to December 2022

## TB Screening

Total Follow-up Visits (N = 117 036)

■ Screened for TB ■ Not Screened for TB

Figure 27: Proportion of patients Screened for TB at Follow-Up Visits in MHSS Health Facilities in Namibia, October to December 2022

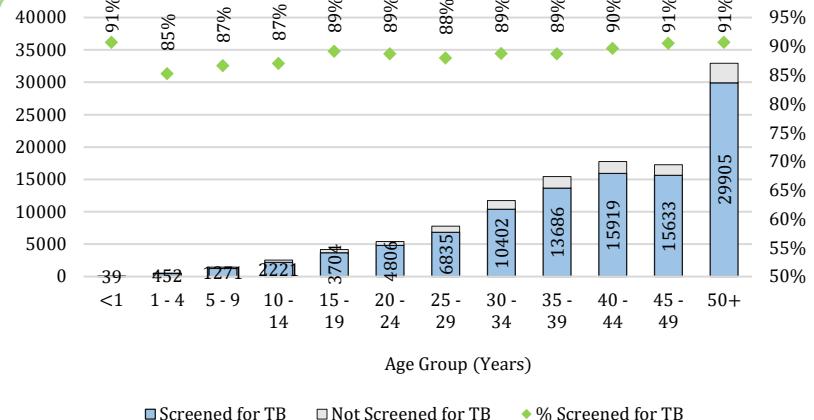

Figure 28: Proportion of patients Screened for TB at Follow-Up Visits by Age Group in MHSS Health Facilities in Namibia, October to December 2022

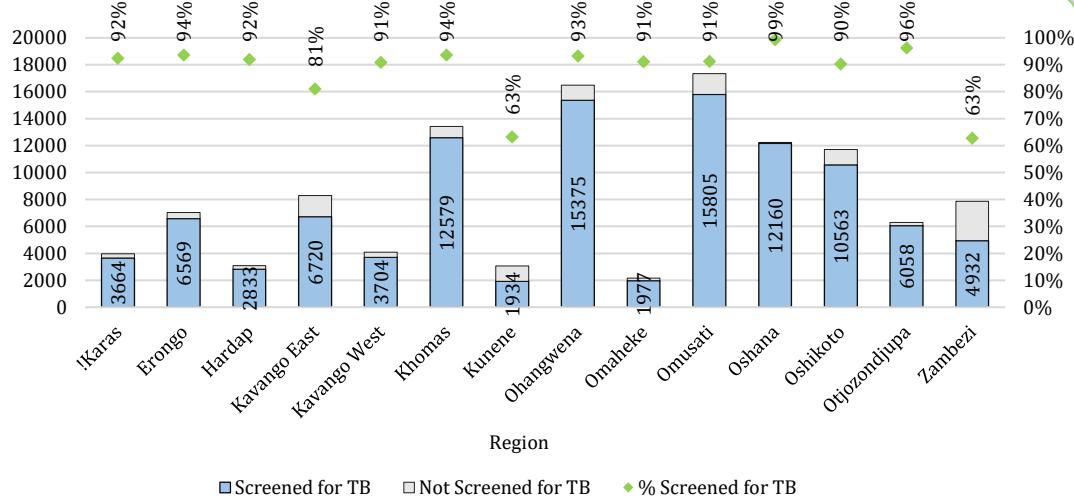

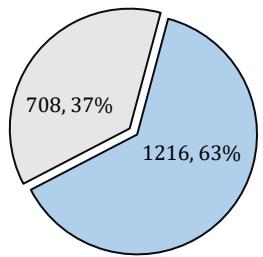

Figure 29: Proportion of Patients Screened for TB at Follow-Up Visits by Region in MHSS Health Facilities in Namibia, October to December 2022

## TB Preventative Therapy (TPT)

Total ART New Initiations eligible for TPT: N = 1924

■ Started ART and TPT    □ Started ART But No TPT

Figure 30: Proportion of Patients Newly Started on ART Who were Eligible and Initiated on TPT in MHSS Health Facilities in Namibia, October to December 2022

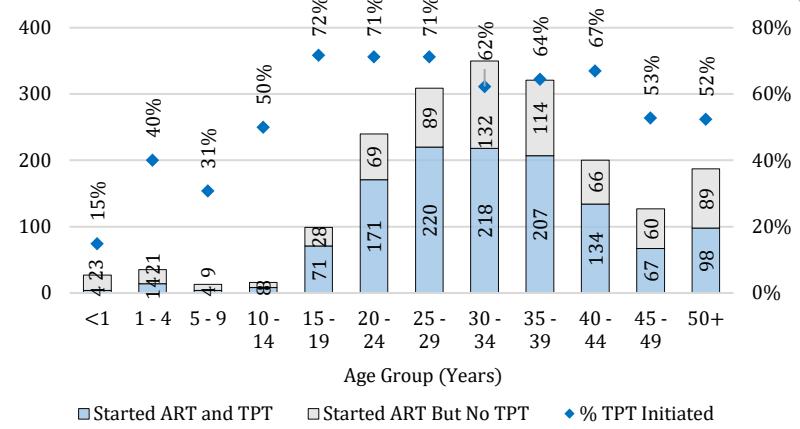

Figure 31: Proportion of Patients Newly Started on ART Who were Eligible and Initiated on TPT by Age Group in MHSS Health Facilities in Namibia, October to December 2022

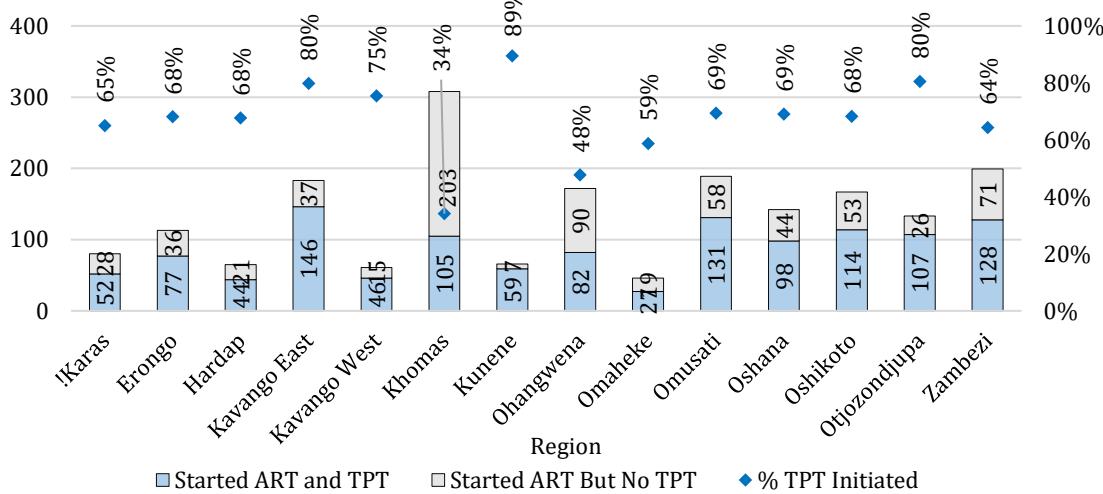

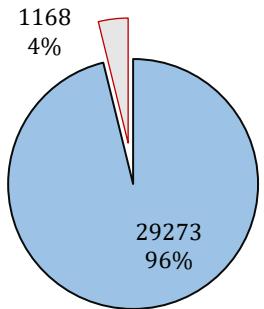

Figure 32: Proportion of Patients Newly Started on ART Who were Eligible and Initiated on TPT by Region in MHSS Health Facilities in Namibia, October to December 2022

## Viral Load Testing and Suppression

Total Viral Load done: **30 441**

■ VL Suppressed   ■ VL Not Suppressed

Figure 33: Proportion of patients with Viral Load Done who are Virally Suppressed (VL<1000 copies/ $\mu\text{l}$  of blood) in MHSS Health Facilities in Namibia, October to December 2022

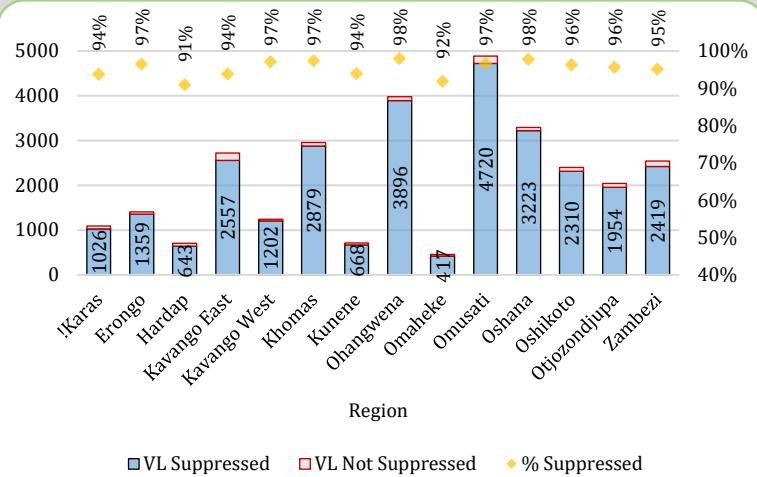

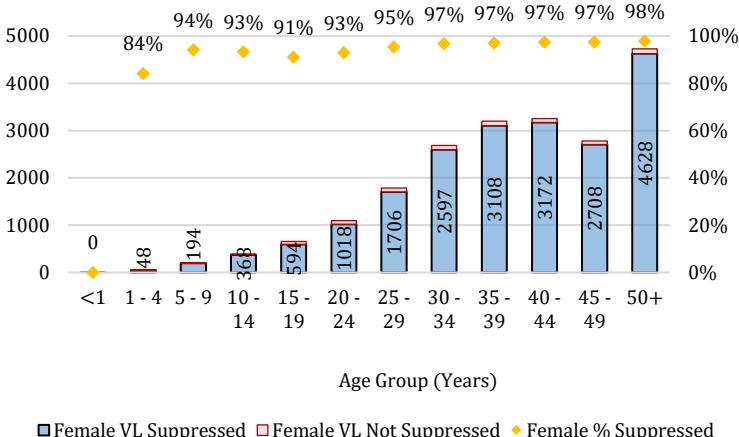

Figure 34: Proportion of patients with Viral Load Done who are Virally Suppressed (VL<1000 copies/ $\mu\text{l}$  of blood) by Region in MHSS Health Facilities in Namibia, October to December 2022

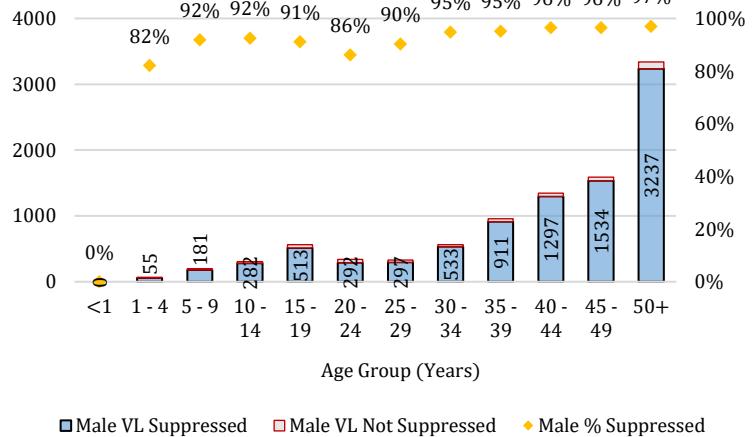

### Female VL Suppression

■ Female VL Suppressed   ■ Female VL Not Suppressed   ♦ Female % Suppressed

Figure 35: Proportion of Female Patients with Viral Load Done who are Virally Suppressed (VL<1000 copies/ $\mu\text{l}$  of blood) by Age Group in MHSS Health Facilities in Namibia, October to December 2022

### Male VL Suppression

■ Male VL Suppressed   ■ Male VL Not Suppressed   ♦ Male % Suppressed

Figure 36: Proportion of Male patients with Viral Load Done who are Virally Suppressed (VL<1000 copies/ $\mu\text{l}$  of blood) by Age Group in MHSS Health Facilities in Namibia, October to December 2022

## Patients Reported to have Died While on ART

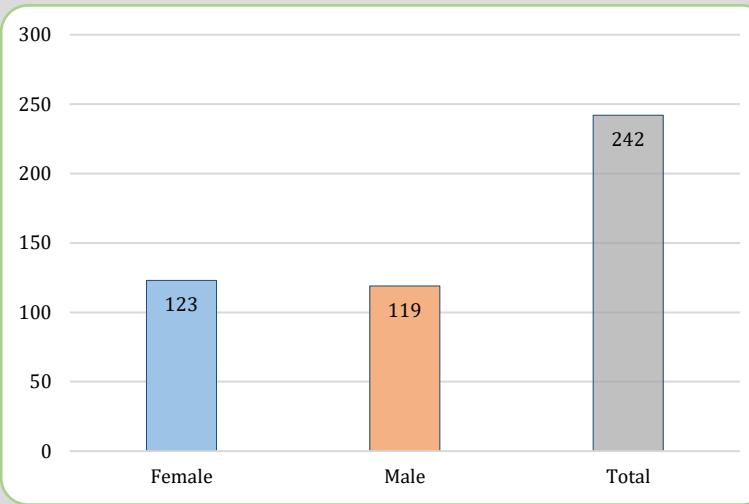

Figure 37: Number of patients Reported to Have Died While on ART by Sex in MHSS Health Facilities in Namibia, October to December 2022

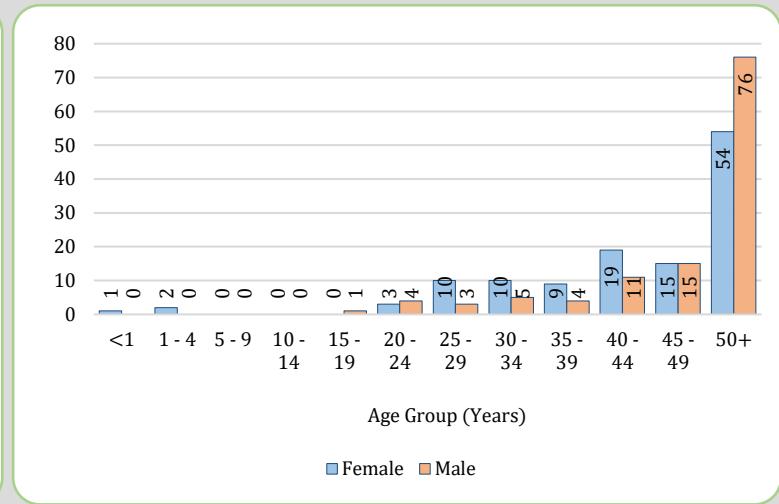

Figure 38: Number of Patients Reported to Have Died While on ART by Age Group and Sex in MHSS Health Facilities in Namibia, October to December 2022

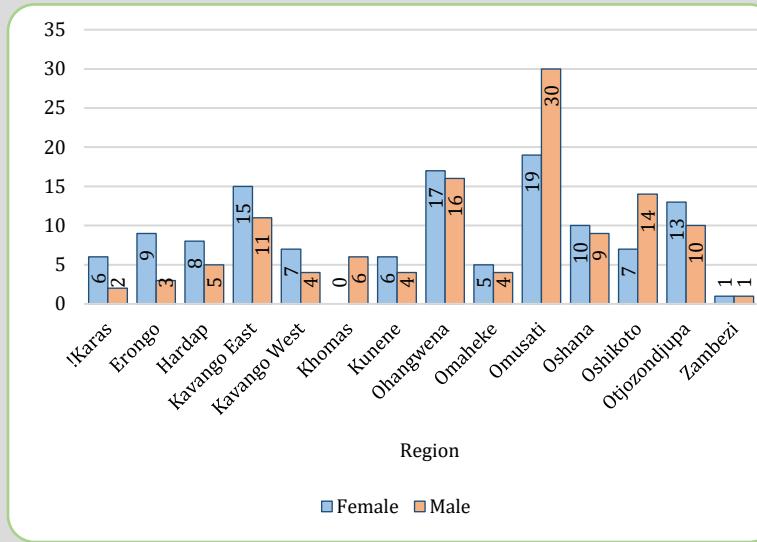

Figure 39: Number of Patients Reported to Have Died While on ART by Region and Sex in MHSS Health Facilities in Namibia, October to December 2022

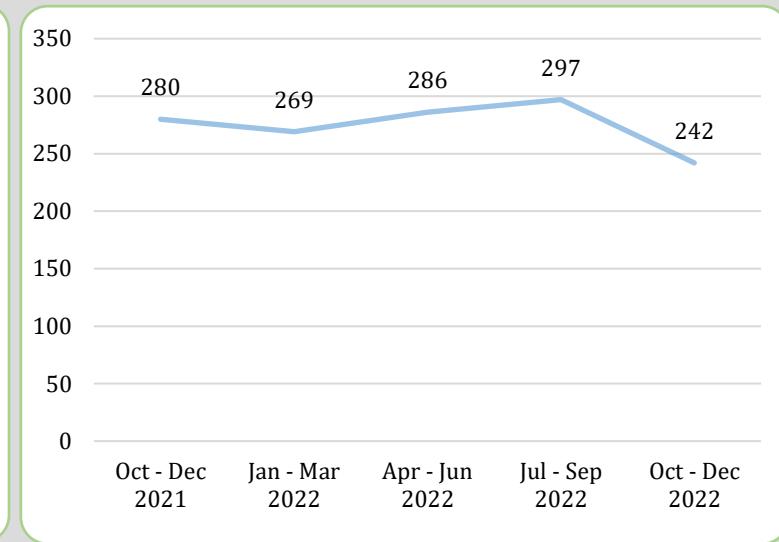

Figure 40: Quarterly Trend of Patients who were Reported to have Died While on ART in MHSS Heath Facilities in Namibia, October 2021 to December 2022

## Reporting Rate in ART Program

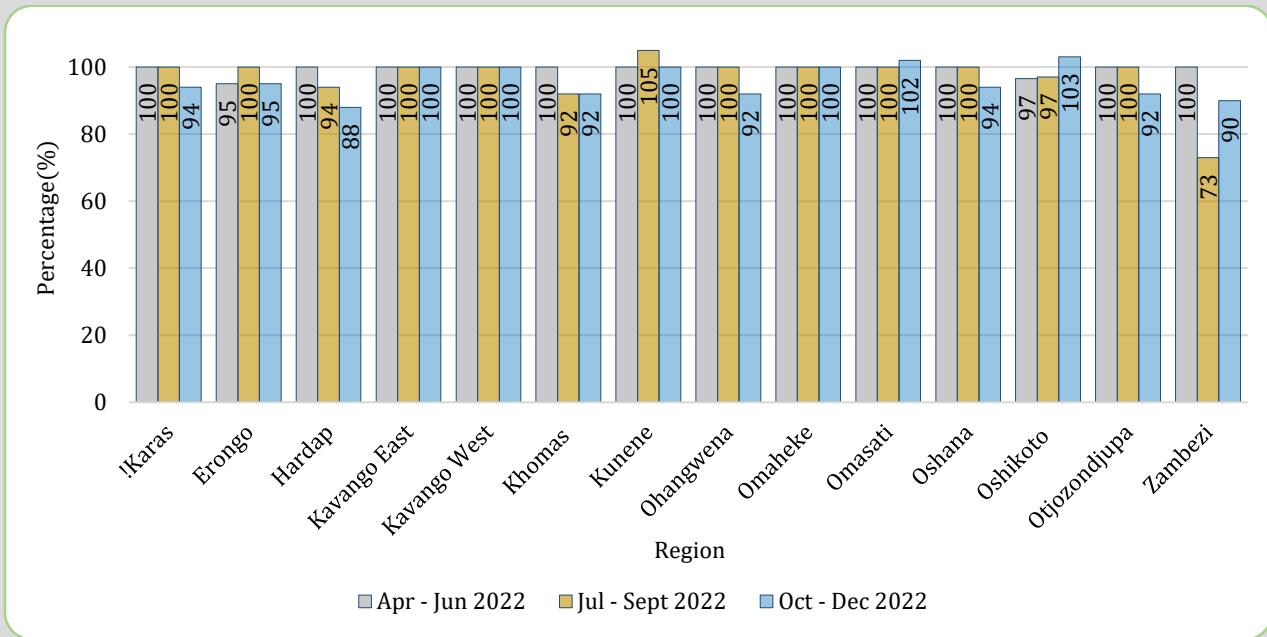

Figure 41: Reporting Rate Trend by Region and Quarter for April to December 2022 in MHSS Health Facilities in Namibia

**\*Note:** more than 100 percentage reported in some regions was due to addition of one or more reporting health facility to the usual reporting facilities, The additional facilities are always incorporated into the denominator the following quarter.

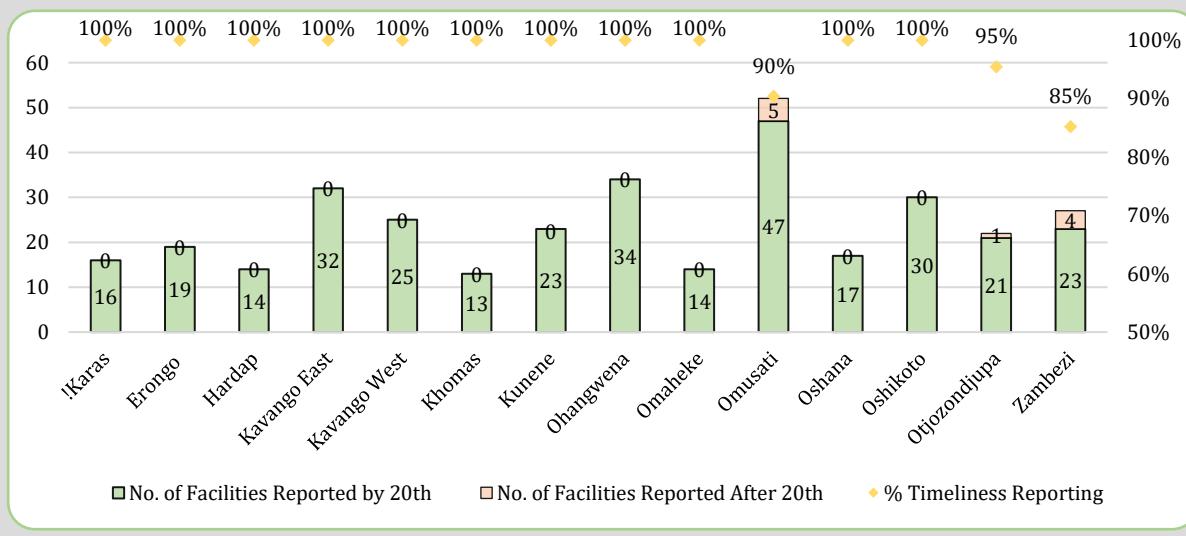

Figure 42: Proportion of Health facilities submitting Reports on Time by Region in MHSS Health Facilities, October to December 2022

## Cervical Cancer Screening Program

### Total Number Screened

Total Number of Women Screened For CxCa (N=6 019)

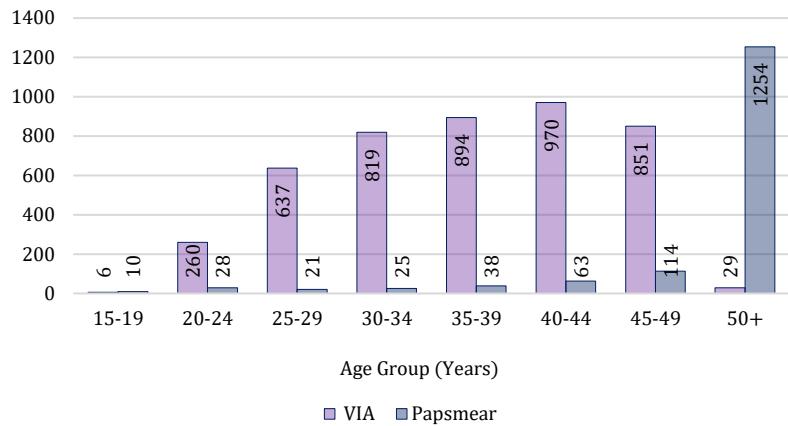

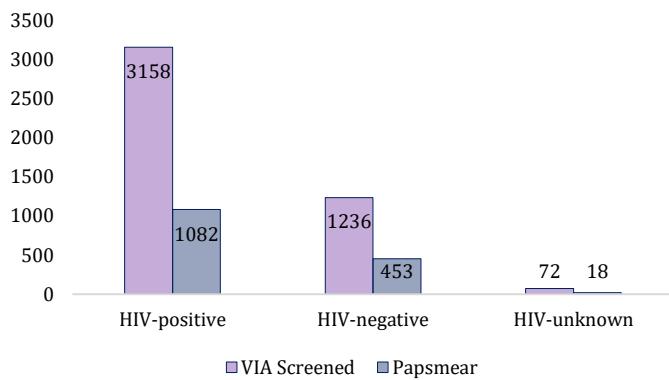

Figure 43: Number of Women Screened for Cervical Cancer by Screening Method and HIV Status in MHSS Health Facilities in Namibia, October to December 2022

Figure 44: Number of Women Screened for Cervical Cancer by Screening Method and Age Group in MHSS Health Facilities in Namibia, October to December 2022

**\*Note:** The reason for high number of women screened using Papsmear method among those aged 50+ years is related to programmatic guidelines to apply the technic for this age group

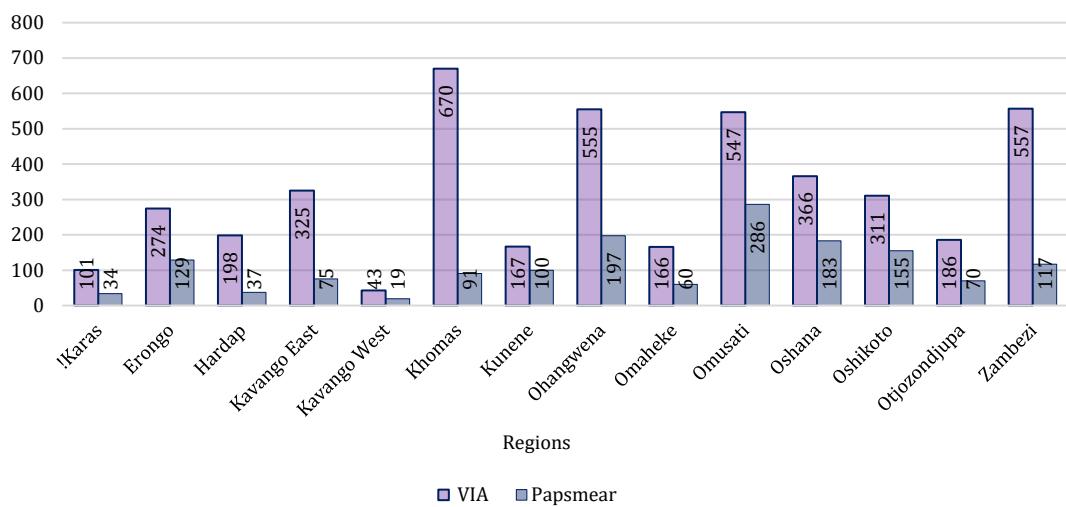

Figure 45: Number of Women Screened for Cervical Cancer by Screening Method and Region in MHSS Health Facilities in Namibia, October to December 2022

## Cervical Cancer Screening Results

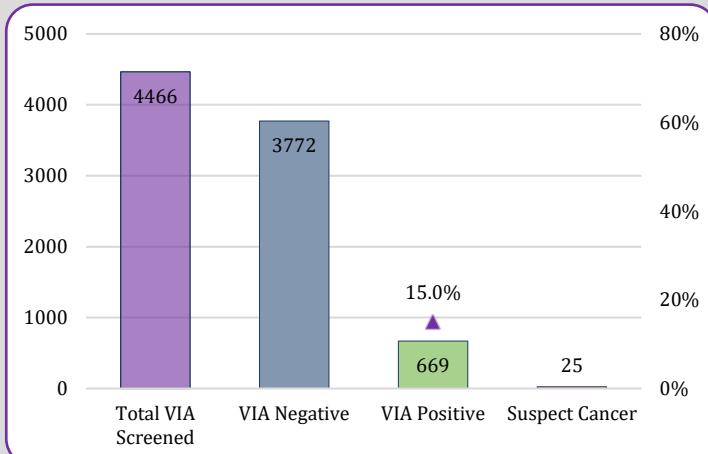

Figure 46: Number of Women Screened for Cervical Cancer Using VIA Method by Screening Result in MHSS Health Facilities in Namibia, October to December 2022

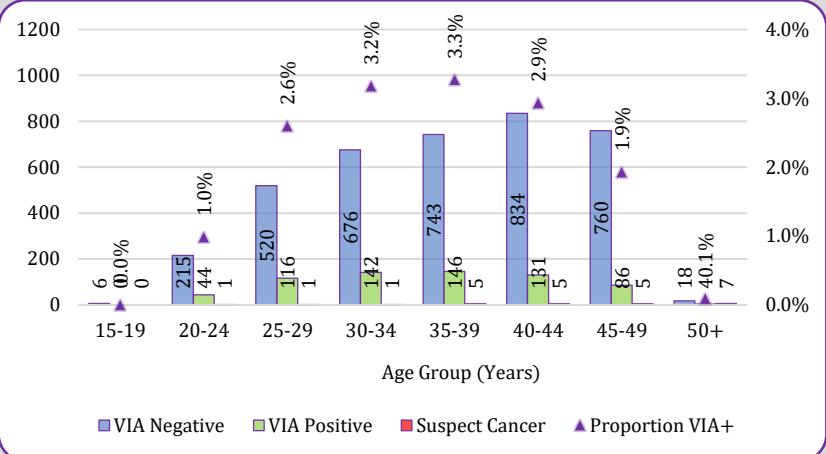

Figure 47: Number of Women Screened for Cervical Cancer Using VIA Method by Screening Result and Age Group in MHSS Health Facilities in Namibia, October to December 2022

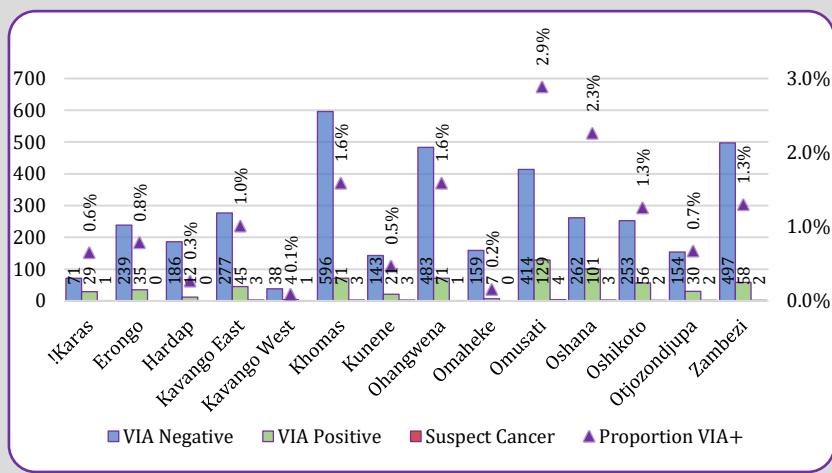

Figure 48: Number of Women Screened for Cervical Cancer Using VIA Method by Screening Results and Region in MHSS Health Facilities in Namibia, October to December 2022

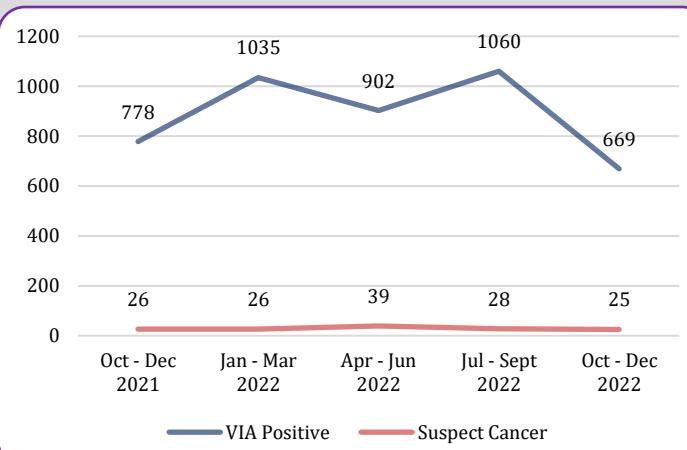

Figure 49: Quarterly Trend of Women Screened for Cervical Cancer Using VIA Method by Screening Result in MHSS Health Facilities in Namibia, October 2021 to December 2022

## Treatment Methods for Abnormal Screening Results

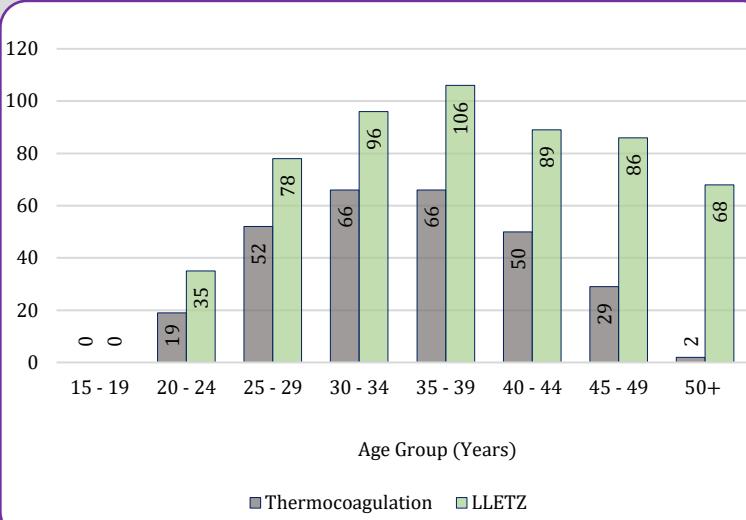

Figure 50: Number of VIA Positive Women Treated for Pre-Cancerous Lesion by Treatment Method and Age Group in MHSS Health Facilities in Namibia, October to December 2022

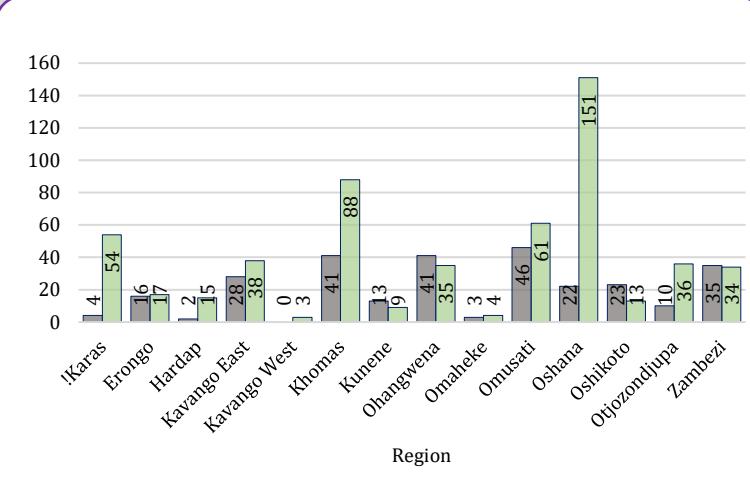

Figure 51: Number of VIA Positive Women Treated for Pre-Cancerous Lesion by Treatment Method and Region in MHSS Health Facilities in Namibia, October to December 2022

## Voluntary Medical Male Circumcision (VMMC)

**\*Note:** Data reported under VMMC includes number of males circumcised under the VMMC program and male circumcisions done for any other purpose.

### Number of VMMC Done

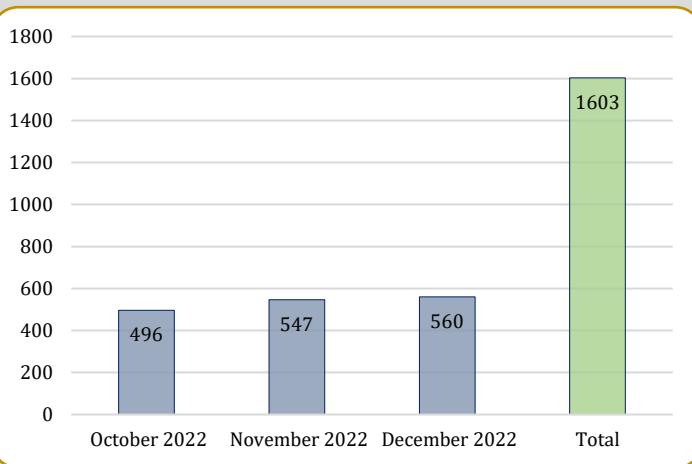

Figure 52: Number of VMMC Done by Month in MHSS Health Facilities in Namibia, October to December 2022

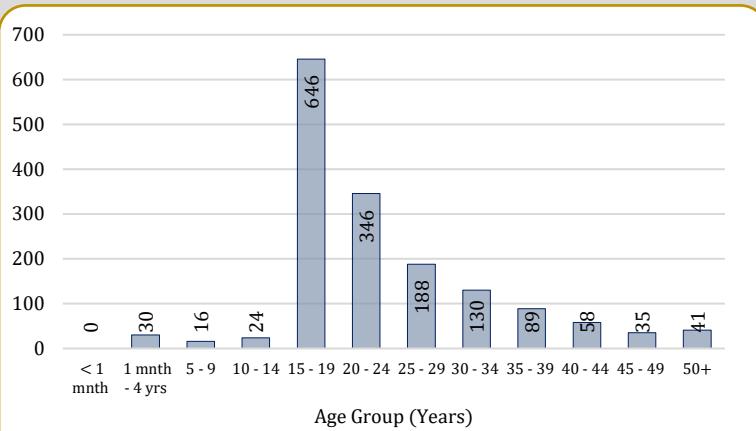

Figure 53: Number of VMMC Done by Age Group in MHSS Health Facilities in Namibia, October to December 2022

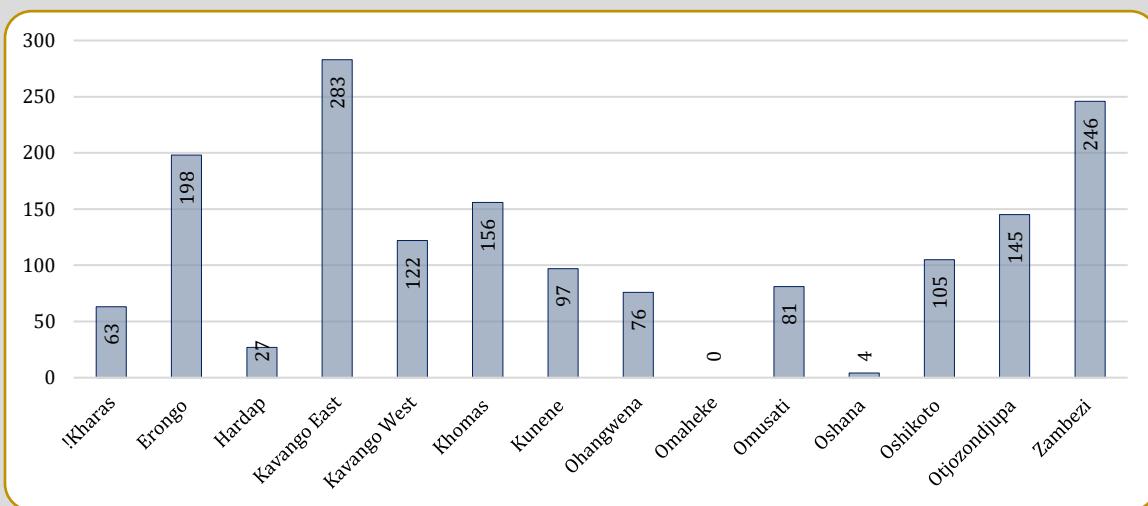

Figure 54: Number of VMMC Done by Region in MHSS Health Facilities in Namibia, October to December 2022

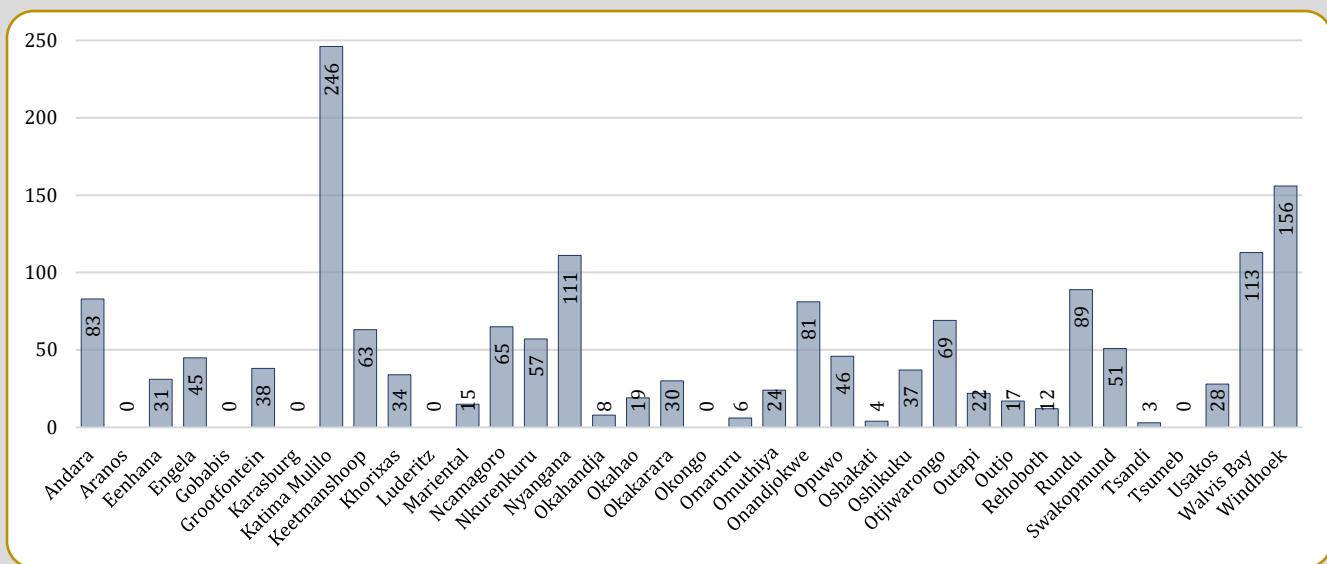

Figure 55: Number of VMMC Done by District in MHSS Health Facilities in Namibia, October to December 2022

## HIV Testing in VMMC

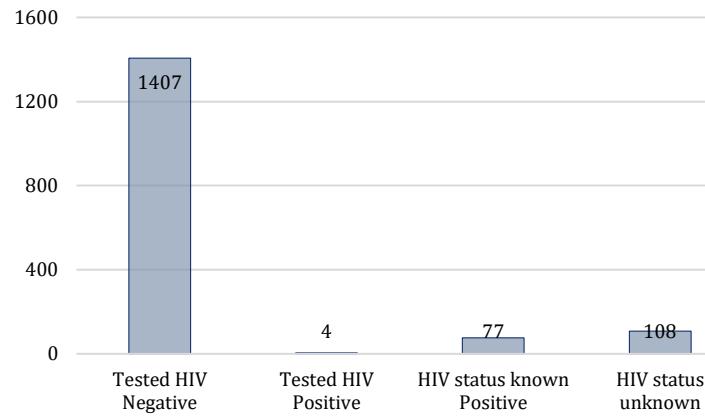

Figure 56: Number of HIV Testing Done in VMMC Settings in MHSS Health Facilities in Namibia, October to December 2022

## VMMC Quarterly Trends

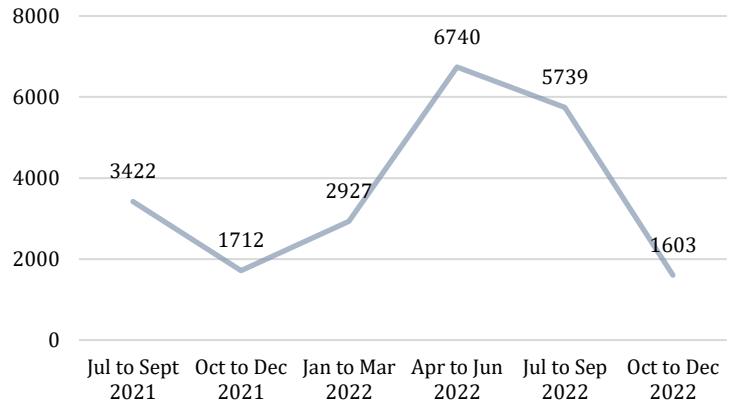

Figure 57: Quarterly Trend for VMMC Done in MHSS Health Facilities in Namibia, July 2021 to December 2022

**Note:** HIV Status Unknown could represent clients who presented a recent HIV negative result and clients who refused HIV testing at VMMC.

## Reporting Rate in VMMC

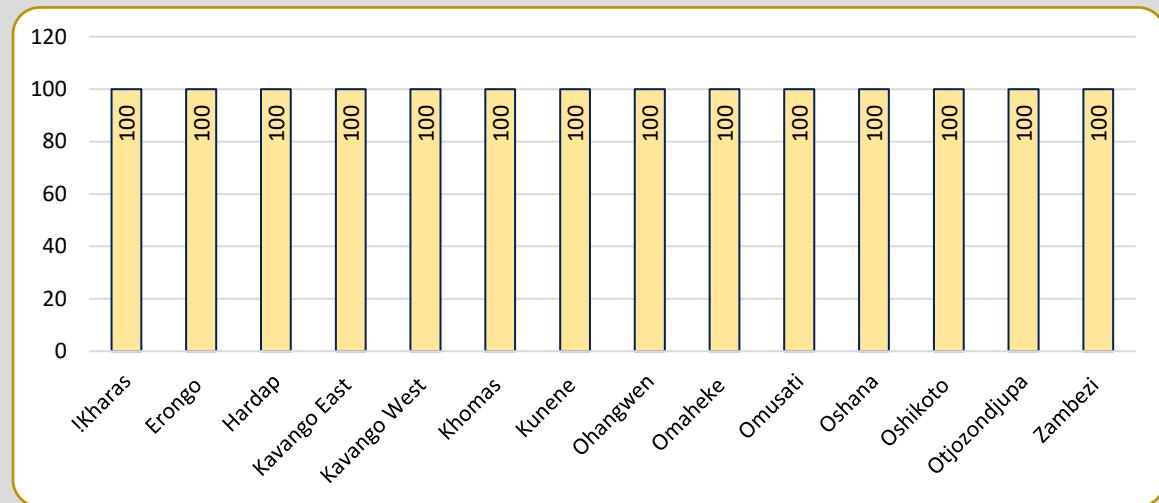

Figure 58: Reporting Rate in VMMC by Region in MHSS Health Facilities in Namibia, October to December 2022

## SECTION II: DATA REPORTED THROUGH THE MULTI-SECTORAL INFORMATION MANAGEMENT SYSTEMS (MIMS)

**\*Note:** MIMS is a system that collects, analyzes, and reports HIV/AIDS response information from non-MHSS facilities including but not limited to private-for-profit facilities, community based Civil Society Organisations (CSO) and other line ministries. The current report contains data from Development Aid from People-to-People (DAPP), Men's Health Program that operates under MHSS (DSP), Namibian Correctional Service (NCS), Omnicare Trust, Walvis Bay Corridor Group (WBCG), Namibia Health Plan (NHP) and Namibia Planned Parenthood Association (NAPPA). These organizations target different population groups such as men (e.g., Men's Health), adolescent girls and young women (e.g., WBCG, DAPP, NHP), key population groups (e.g., NAPPA, WBCG, Omnicare Trust).

### HIV Testing Services

#### HIV Testing Service by Sex

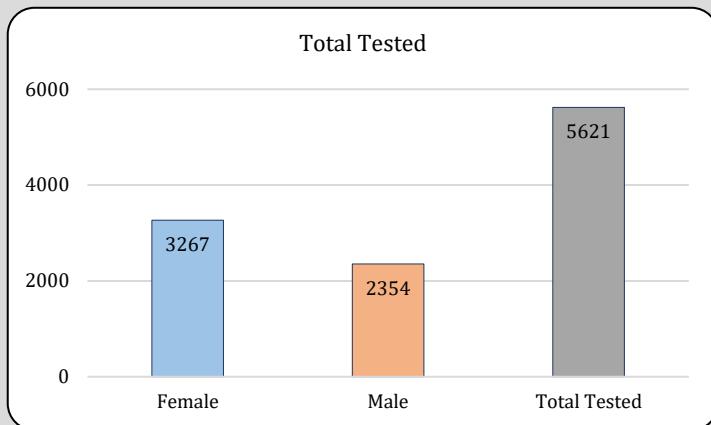

Figure 59: Number of Clients Tested for HIV by Sex in Non-MHSS Facilities in Namibia, October to December 2022

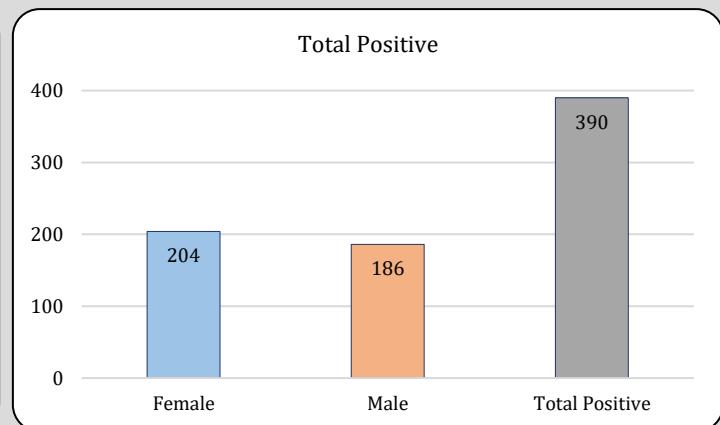

Figure 60: Number of Clients Tested HIV Positive by Sex in Non-MHSS Facilities in Namibia, October to December 2022

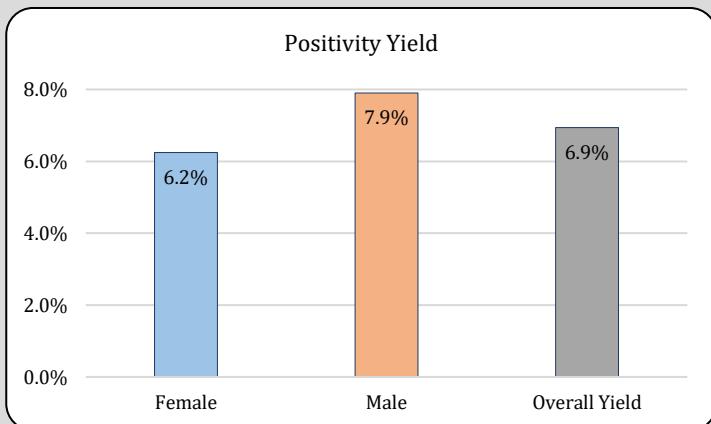

Figure 61: Positivity Yield by Sex in Non-MHSS Facilities in Namibia, October to December 2022

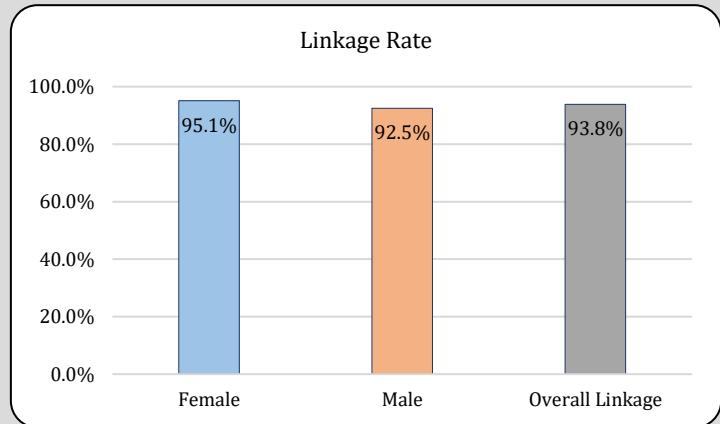

Figure 62: Proportion of Clients Tested HIV Positive and Linked to Care by Sex in Non-MHSS Health Facilities in Namibia, October to December 2022

## HIV Testing Service by Age Group

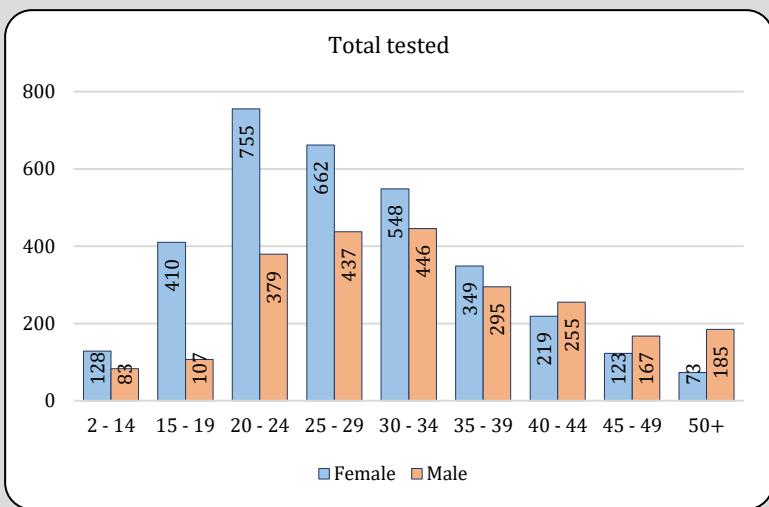

Figure 63: Number of Clients Tested for HIV by Age Group and Sex in Non-MHSS Settings in Namibia, October to December 2022

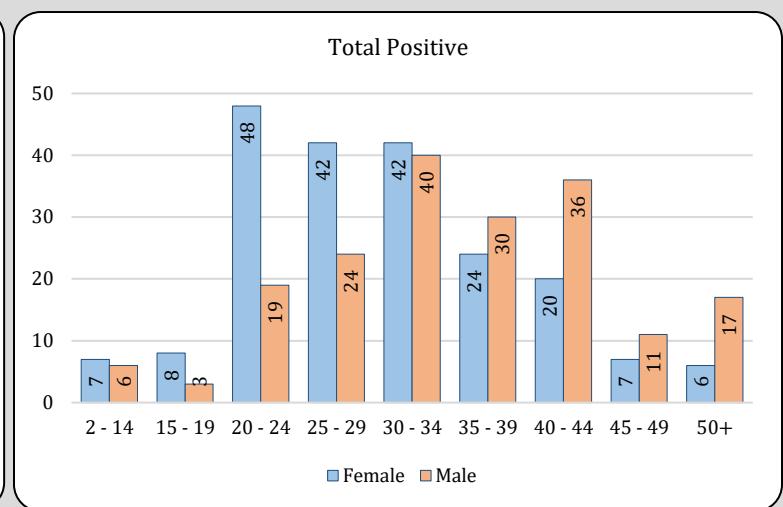

Figure 64: Number of Clients Tested HIV Positive by Age Group and Sex in Non-MHSS Settings in Namibia, October to December 2022

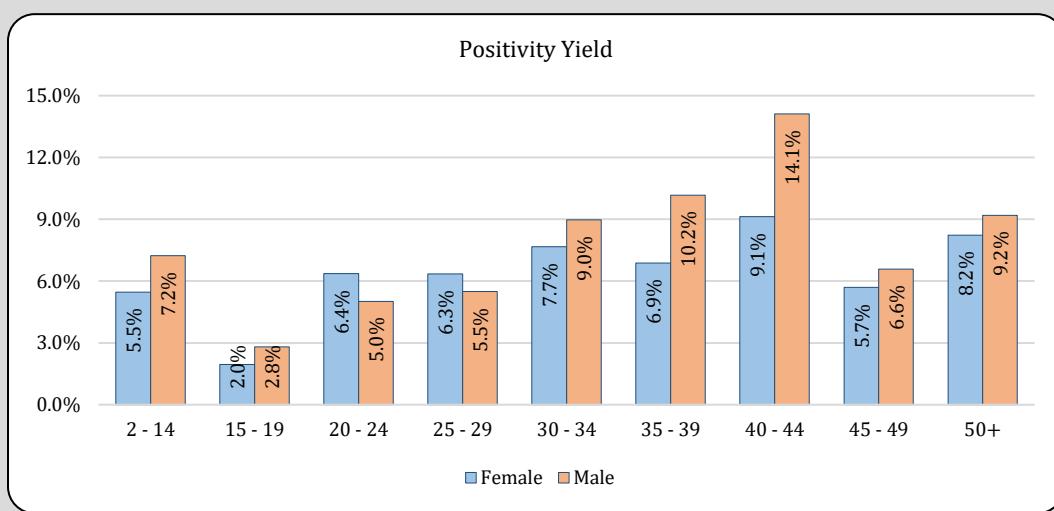

Figure 65: Positivity Yield by Age Group and Sex in Non-MHSS Facilities in Namibia, October to December 2022

## HIV Testing Service by Organisation

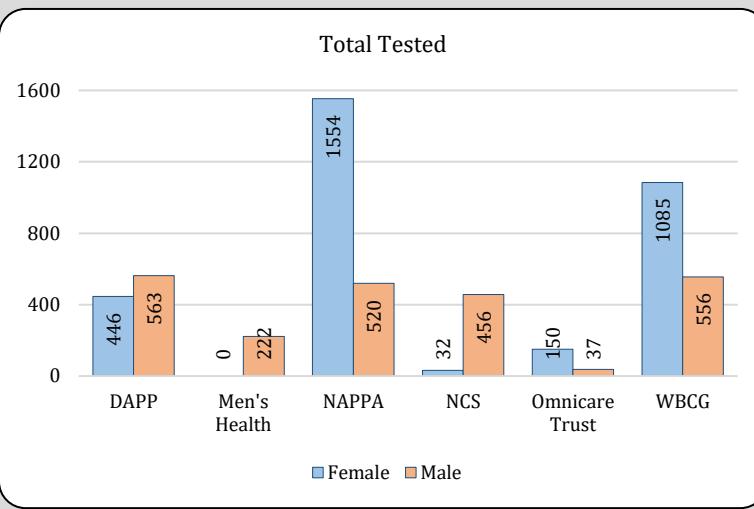

Figure 66: Number of Clients Tested for HIV by Organisation and Sex in Non-MHSS Settings in Namibia, October to December 2022

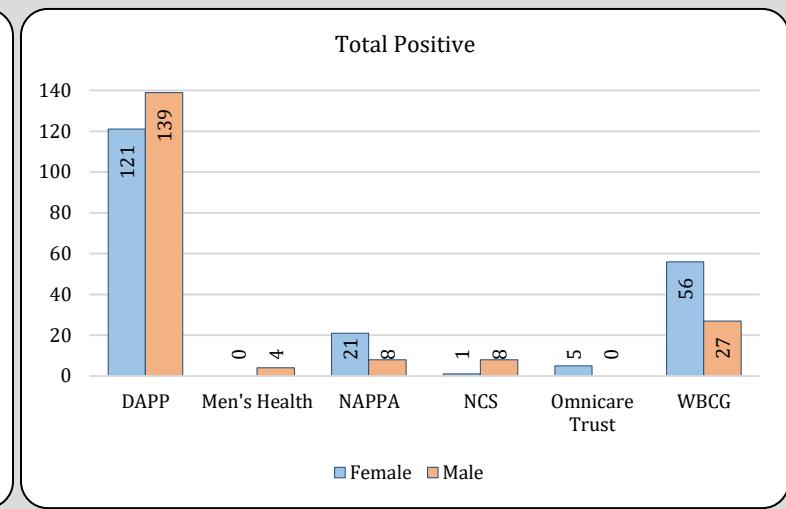

Figure 67: Number of Clients Tested HIV Positive by Organisation and Sex in Non-MHSS Settings in Namibia, October to December 2022

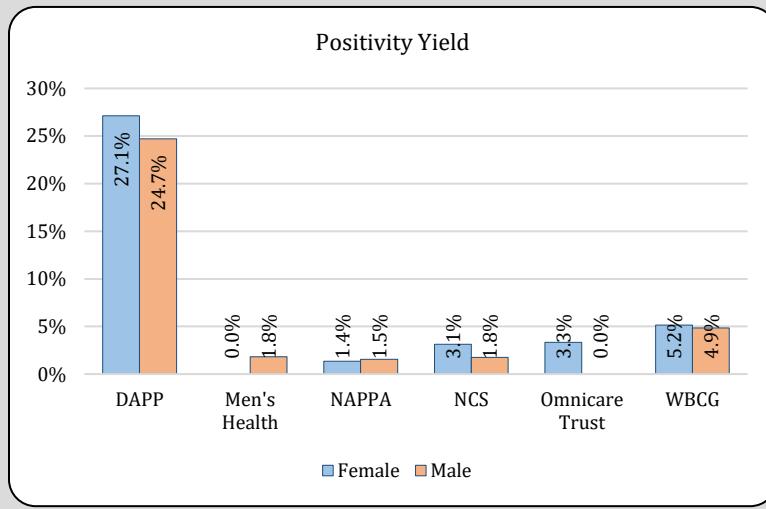

Figure 68: Positivity Yield by Organisation and Sex in Non-MHSS Settings in Namibia, October to December 2022

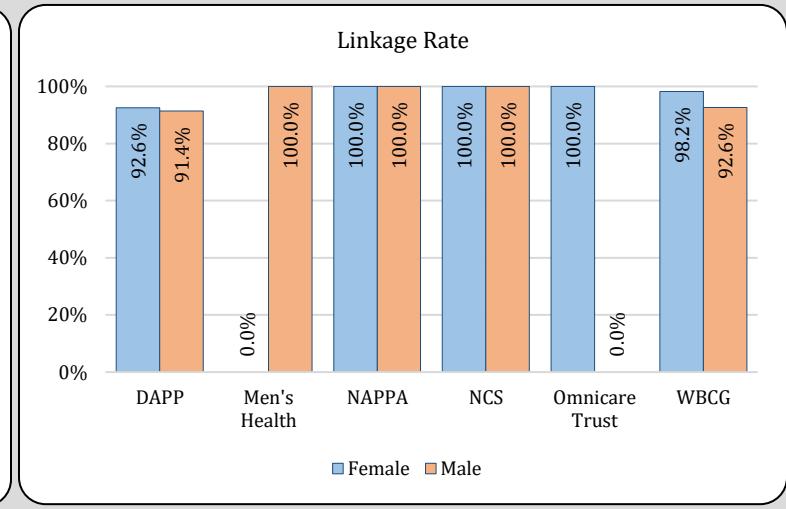

Figure 69: Percentage of Clients Tested HIV Positive and Linked to Care by Organisation and Sex in Non-MHSS Settings in Namibia, October to December 2022

## HIV Testing Service Trends

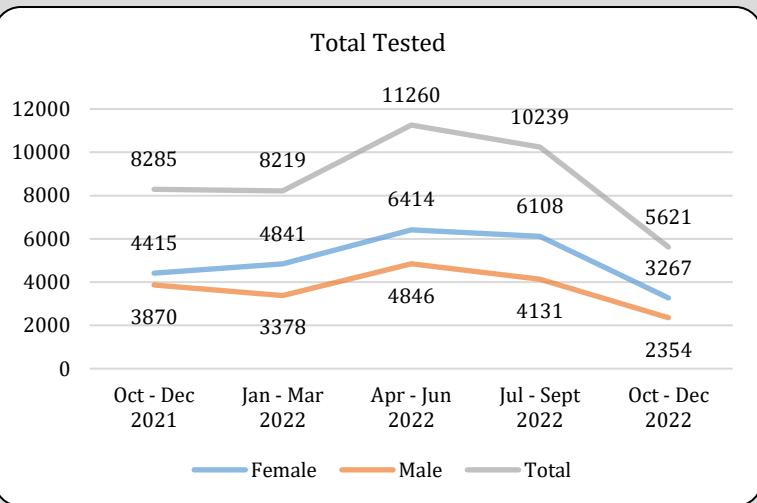

Figure 70: Quarterly Trend of Clients Tested for HIV by Sex from Non-MHSS Settings in Namibia, October 2021 to December 2022

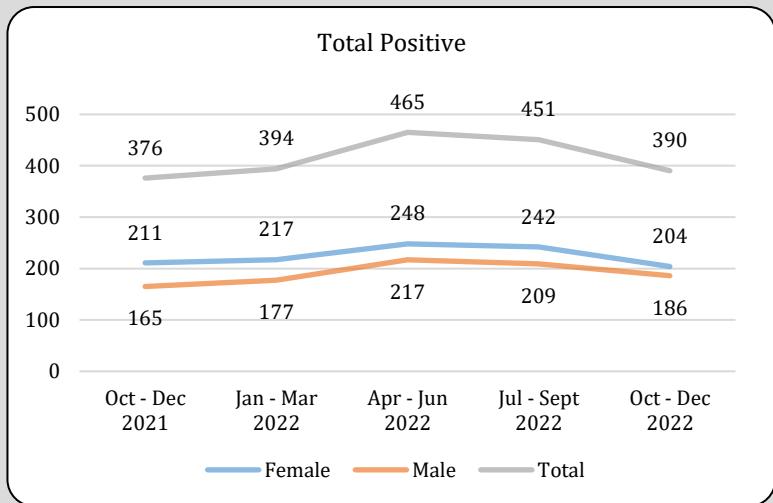

Figure 71: Quarterly Trend of Clients Tested HIV Positive by Sex from Non-MHSS Settings in Namibia, October 2021 to December 2022
